JQUERY MOBILE 1.0 ALPHA 4.1 RELEASED!

jQuery Mobile: Touch-Optimized Web Framework for Smartphones & Tablets

A unified user interface system across all popular mobile device platforms, built on the rock-solid jQuery and jQuery UI foundation. Its lightweight code is built with progressive enhancement, and has a flexible, easily themeable design. Alpha 4.1 Release Notes

Project Goals and Strategy

Seriously cross-platform & cross-device

jQuery mobile framework takes the "write less, do more" mantra to the next level: Instead of writing unique apps for each mobile device or OS, the jQuery mobile framework will allow you to design a single highly branded and customized web application that will work on all popular smartphone and tablet platforms. Device support grid

jQuery Plugins UI Blog About
jQuery
user interface
Download Demos & Documentation Themes Development
jQuery UI provides abstractions for low-level interaction and animation, advanced effects and high-level, themeable widgets, built on top of the jQuery JavaScript Library, that you can use to build highly interactive web applications.
Download jQuery UI
Build custom download
Stable (1.8.4: jQuery 1.3.2+)
Legacy (1.7.3: jQuery 1.3+)
Rich effects and UI widgets
jQuery UI features low-level effect and interaction API's (like drag and drop) as well as full-featured and highly configurable ready-to-use widgets. Supports IE 6.0+, FF 2+, Safari 3.1+, Opera 9.0+ and Chrome 1.0.
Browse all effects & widgets
Powerful theme framework
Unique CSS framework, ThemeRoller tool and theme gallery makes creating a custom look and feel for your application fast and easy.

The challenge we face

John Resig hath spoken

The mobile web is massive

6.8 Billion people

5.3 Billion active mobile subscriptions

http://www.itu.int/ITU-D/ict/material/FactsFigures2010.pdf

25% of US is Mobile-*Only*

we can't believe it either.

Psst...they're not all iPhones

10+ billion

web-enabled mobiles by 2013

Source: ITU, Mark Lipacis, Morgan Stanley Research.

History repeats itself

=

We love amazing UX

But not at the expense of general access

"Anyone who slaps a 'this page is best viewed with Browser X' label on a Web page appears to be yearning for the bad old days [...]"

Tim Berners-Lee, July 1996

This is the web

People expect it to work everywhere.

Goals, philosophy, approach

Getting Responsive

Embracing CSS3 for fluid layouts

MAY 25, 2010

Responsive Web Design

by ETHAN MARCOTTE

Published in: CSS, Layout, User Interface Design, Mobile, Mobile Design, Mobile Development

Discuss this article » | Share this article »

> *The control which designers know in the print medium, and often desire in the web medium, is simply a function of the limitation of the printed page. We should embrace the fact that the web doesn't have the same constraints, and design for this flexibility. But first, we must "accept the ebb and flow of things."*
>
> *John Allsopp, "A Dao of Web Design"*

The English architect Christopher Wren once quipped that his chosen field "aims for Eternity," and there's something appealing about that formula: Unlike the web, which often feels like aiming for next week, architecture is a discipline very much defined by its permanence. A building's foundation defines its footprint, which defines its frame, which shapes the facade. Each phase of the architectural process is more immutable, more unchanging than the last.

Getting started

Getting started

jQuery Mobile step-by-step

Anatomy of a page

HTML 5 document

```
<!DOCTYPE html>

<html>

  <head>
    <meta charset="utf-8">
    <title>jQuery Mobile Page</title>
  </head>

  <body>
  </body>

</html>
```

jQuery, Mobile + Theme CSS

```
<!DOCTYPE html>
<html>
<head>
   <meta charset="utf-8">
   <title>jQuery Mobile Page</title>
   <meta name="viewport" content="width=device-width, minimum-scale=1,
   maximum-scale=1">
   <link rel="stylesheet" href="/jquery.mobile-1.0a4.1.min.css">
   <script src="/jquery-1.5.2.min.js"></script>
   <script src="/jquery.mobile-1.0a4.1.min.js"></script>
</head>
```

About that Meta Tag...

Currently using:

```
content="width=device-width, minimum-scale=1, maximum-scale=1"
```

Where we're headed:

```
content="width=device-width, initial-scale=1"
```

Polyfill:

http://www.blog.highub.com/mobile-2/a-fix-for-iphone-viewport-scale-bug/

Use the CDN

```
<link rel="stylesheet" href="http://
code.jquery.com/mobile/1.0a4.1/
jquery.mobile-1.0a4.1.min.css">

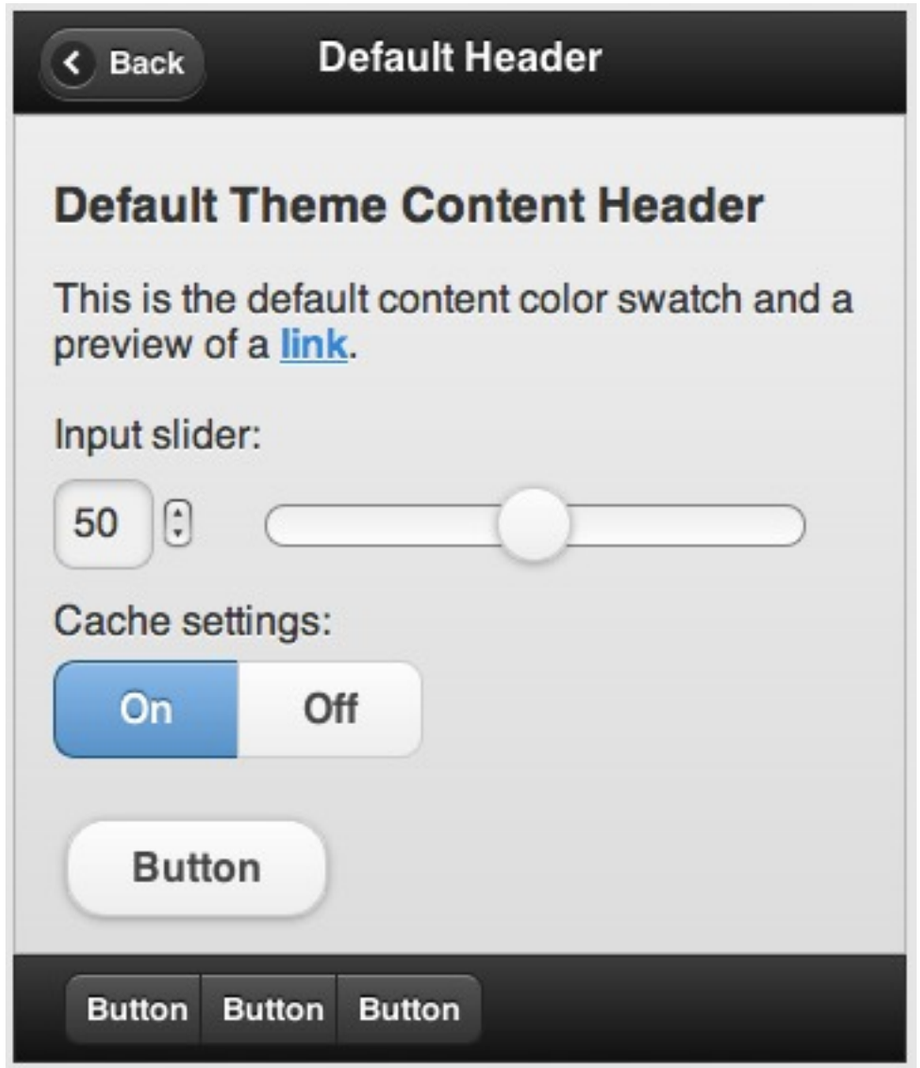
<script src="http://code.jquery.com/
jquery-1.5.2.min.js"></script>

<script src="http://code.jquery.com/mobile/
1.0a4.1/jquery.mobile-1.0a4.1.min.js"></script>
```

data-role="page"

```
<body>
    <div data-role="page">
        <!-- jQuery Mobile page content goes here -->
    </div><!-- /page -->
</body>
```

Page data-roles



header

content

footer

Page data-roles

```
<body>
    <div data-role="page">

      <div data-role="header">
      </div>

      <div data-role="content">
      </div>

      <div data-role="footer">
      </div>

    </div><!-- /page -->
</body>
```

Simple content

```
<body>
    <div data-role="page">

        <div data-role="header">
            <h1>Welcome</h1>
        </div>

        <div data-role="content">
            <p>Hello world</p>
        </div>

    </div><!-- /page -->
</body>
```

Basic list

```

    </ul>

</div><!-- /content -->
```

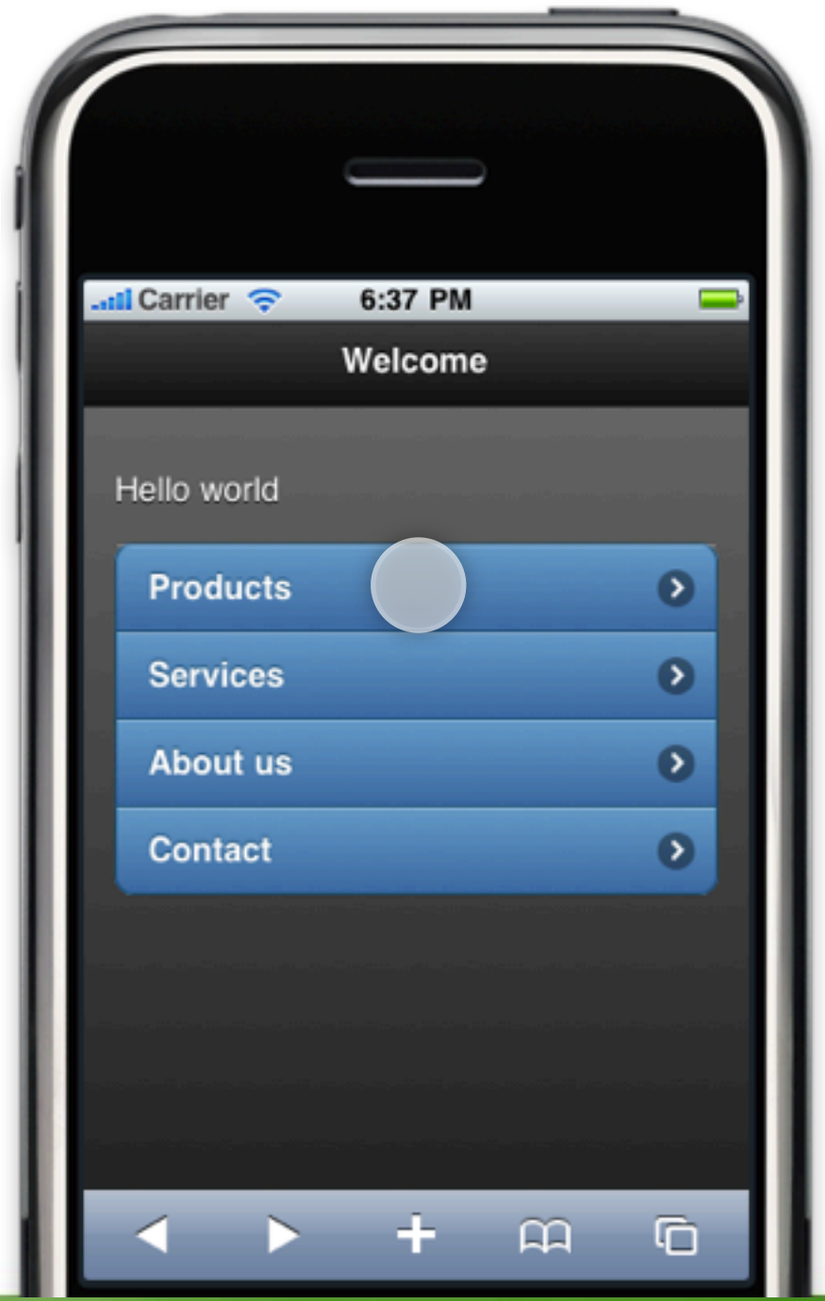
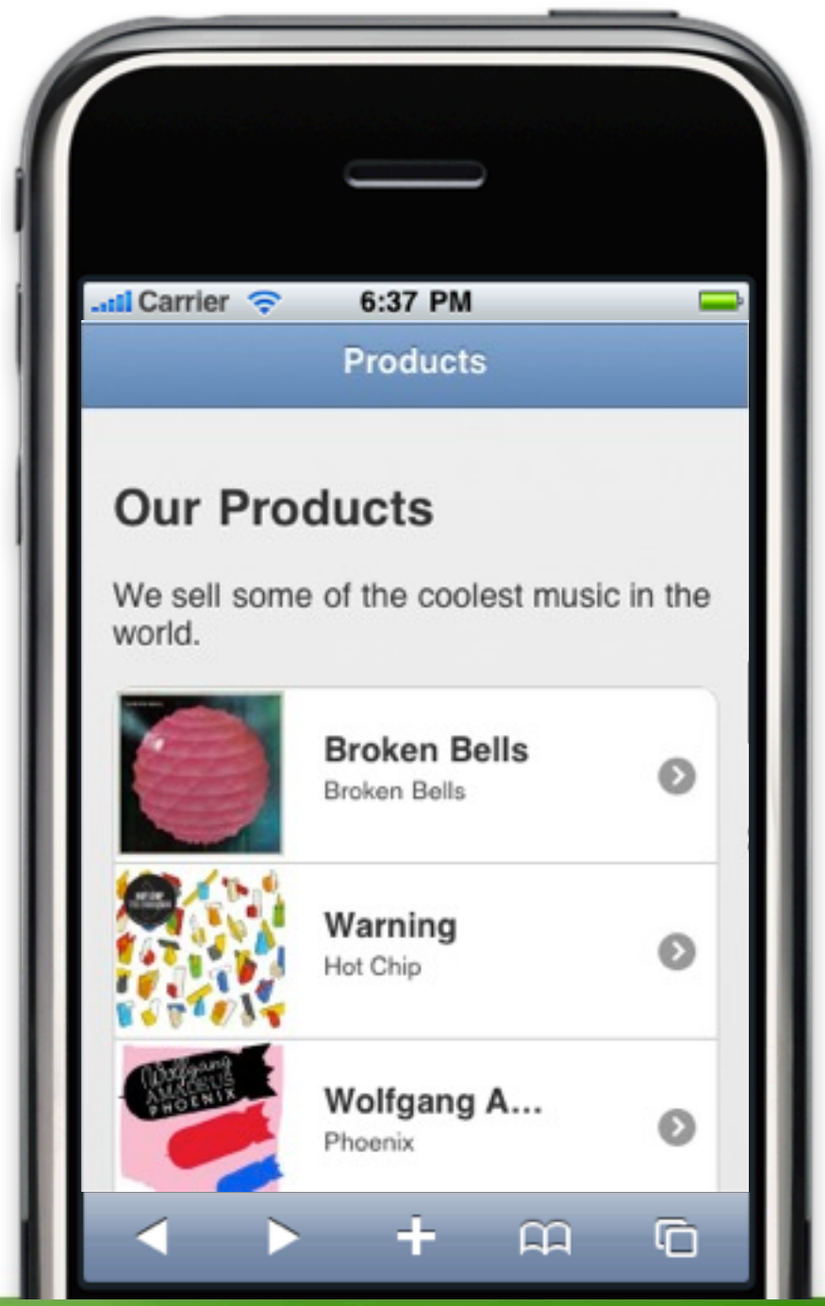
Hijax link + add to DOM

Hijax link + add to DOM



Hijax link + add to DOM



Meaningful URLs

Supports back button history, deep linking & bookmarking

Multi-page Documents

Each "page" has a unique ID

```
<body>

    <div data-role="page" id="home">
    </div><!-- /home page -->

    <div data-role="page" id="products">
    </div><!-- /products page -->

    <div data-role="page" id="services">
    </div><!-- /home page -->

    <div data-role="page" id="about">
    </div><!-- /home page -->

   <div data-role="page" id="contact">
    </div><!-- /home page -->

</body>
```

...with internal #anchor links

```
<div data-role="content" data-theme="a">
    <p>Hello world</p>

    <ul data-role="listview" data-inset="true" data-
theme="b">
      <li><a href="#products">Products</a></li>
      <li><a href="#services">Services</a></li>
      <li><a href="#about">About us</a></li>
      <li><a href="#contact">Contact</a></li>
    </ul>

</div><!-- /content -->
```

data-ajax="false"

```
<a href="multi.html" data-ajax="false">Multi</a>
```

*** Required if linking TO a multi-page file to avoid hash namespace collisions**

Change Pages via JS

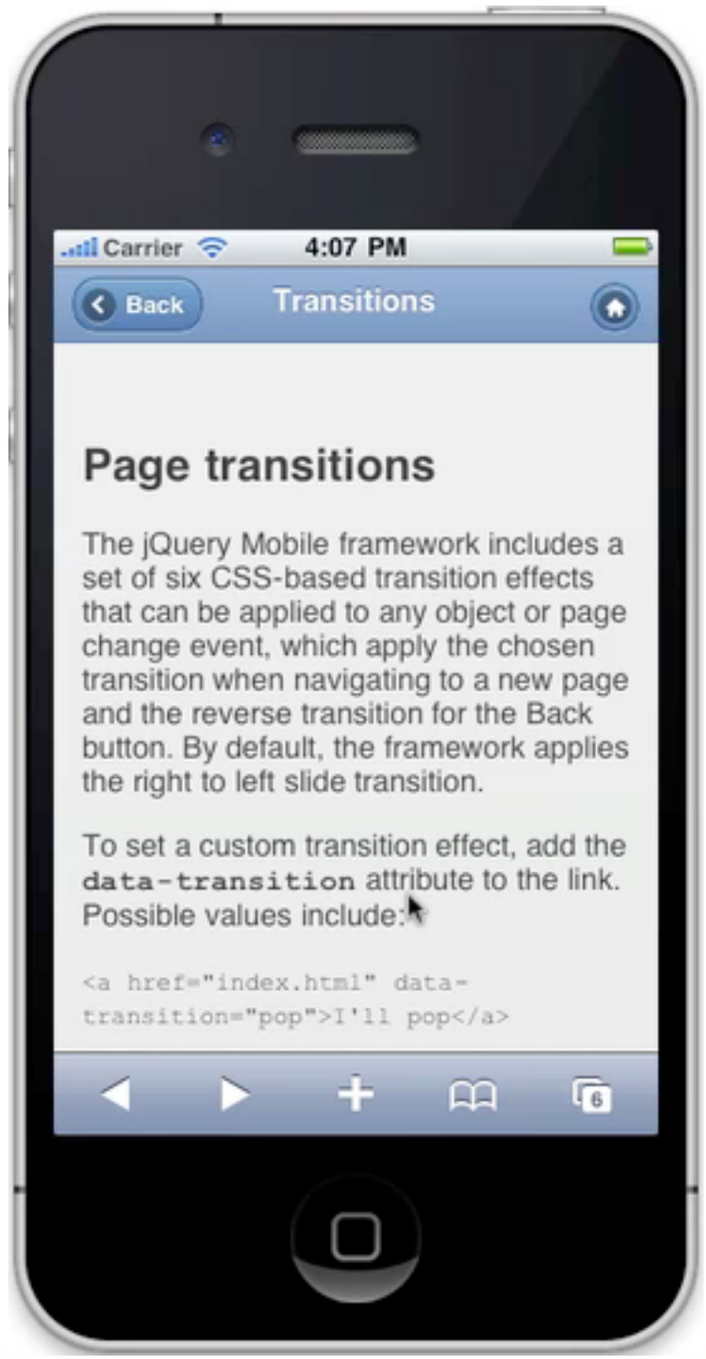
```
$.mobile.changePage( "about/us.html" );
```

...and back!

```
window.history.back();
```

Transitions

data-transition="pop"



data-direction="reverse"

```
<a href="index.html" data-transition="pop"
data-direction="reverse">Home</a>
```

Transitions via jQuery

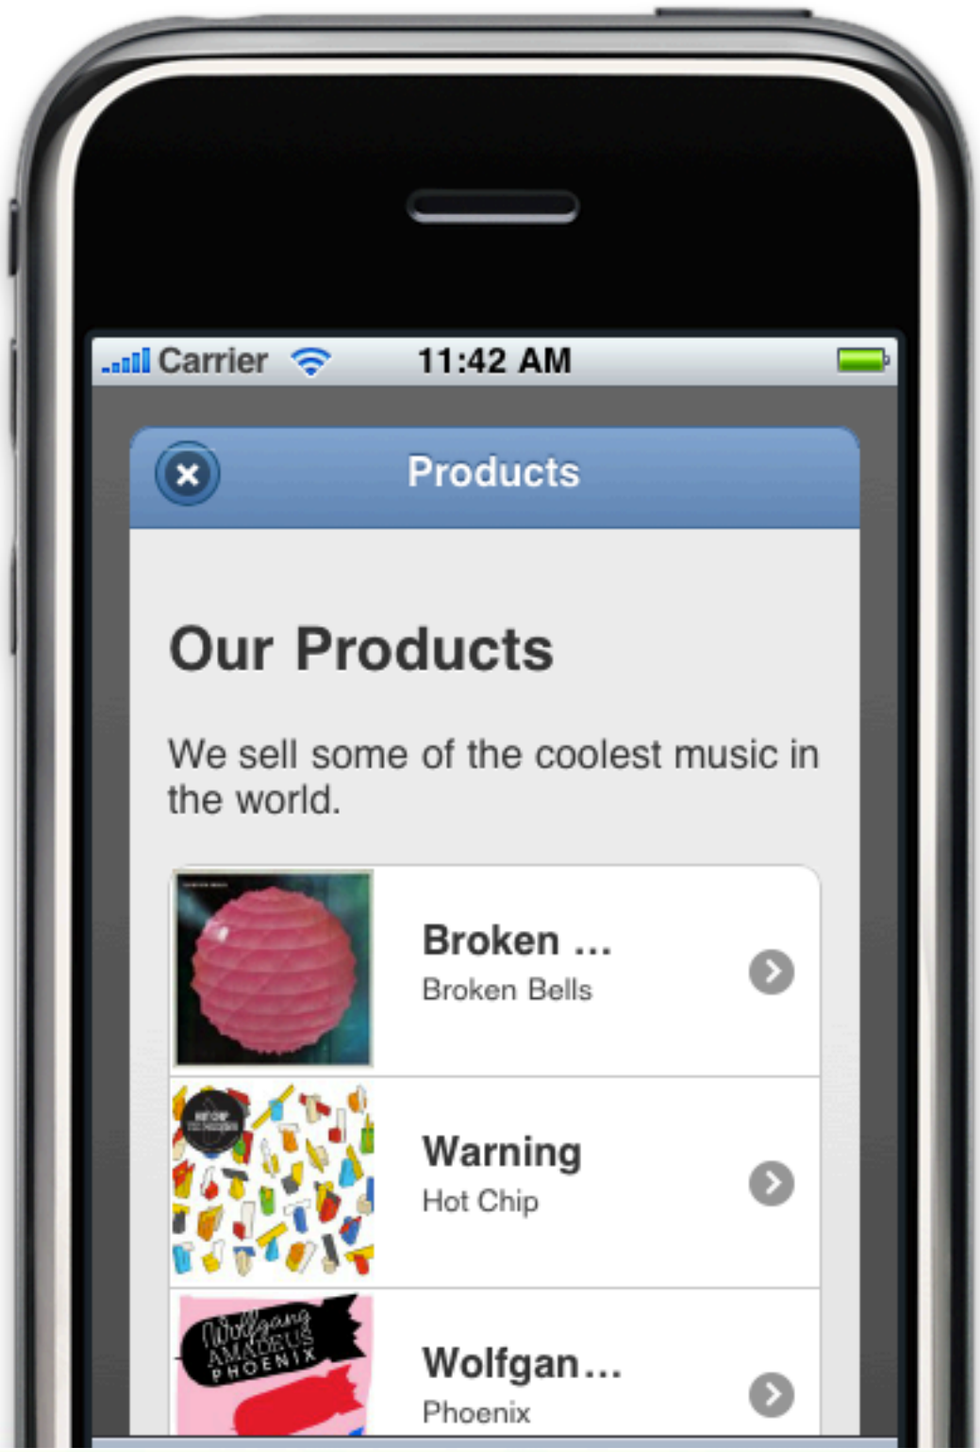
```
$.mobile.changePage(
  "about.html",
  "flip"
);
```

Dialogs

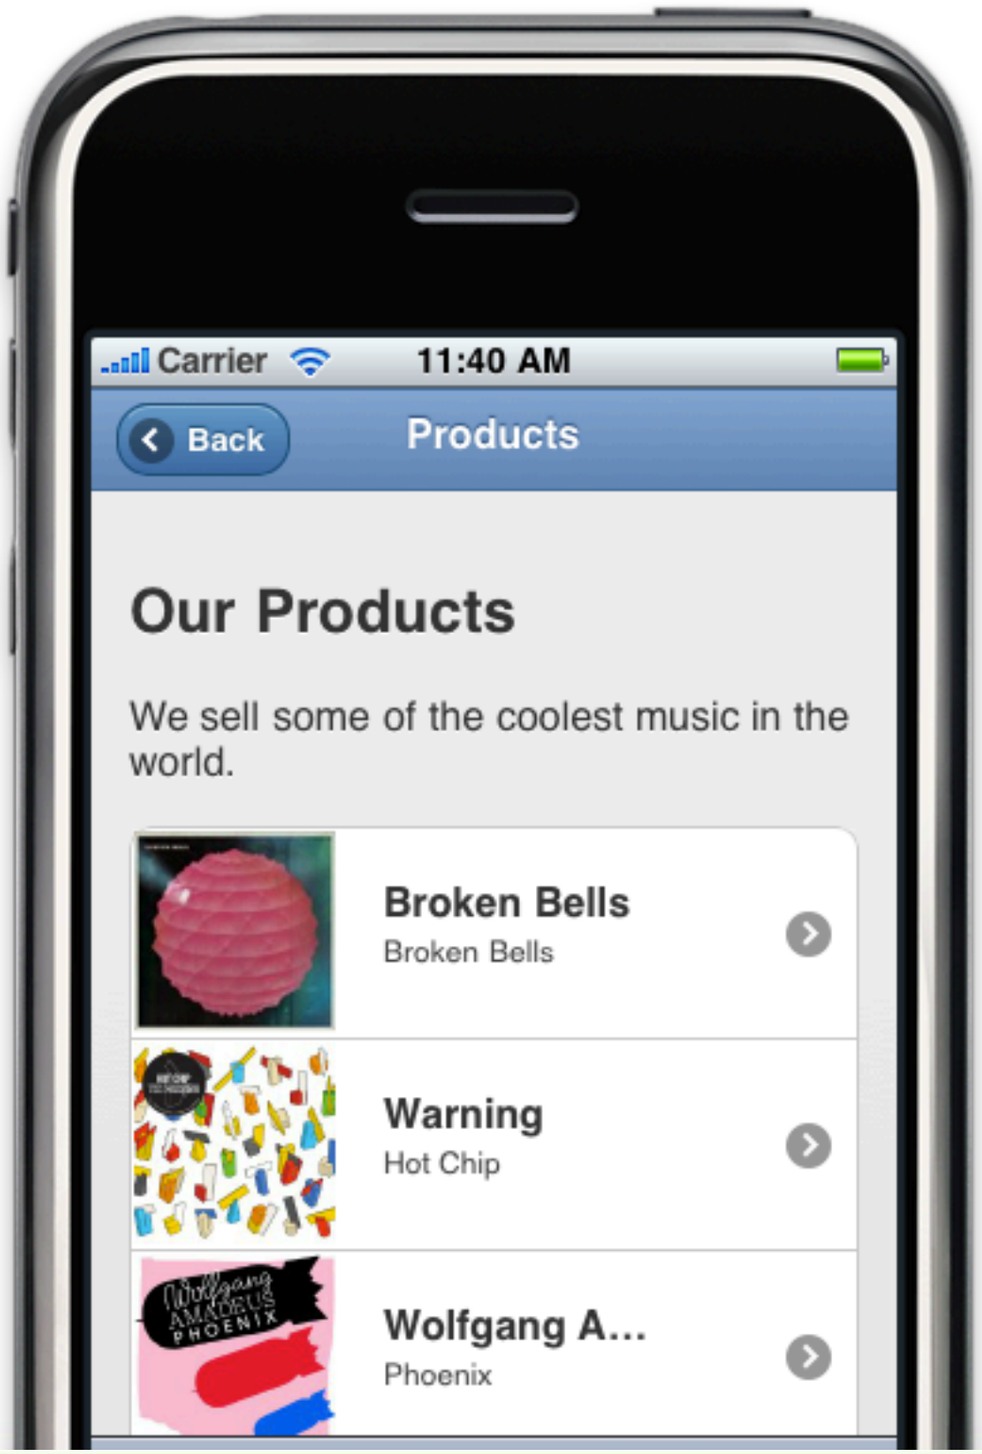
data-rel="dialog"

```
<a href="products.html" data-rel="dialog">Home</a>
```

data-rel="dialog"

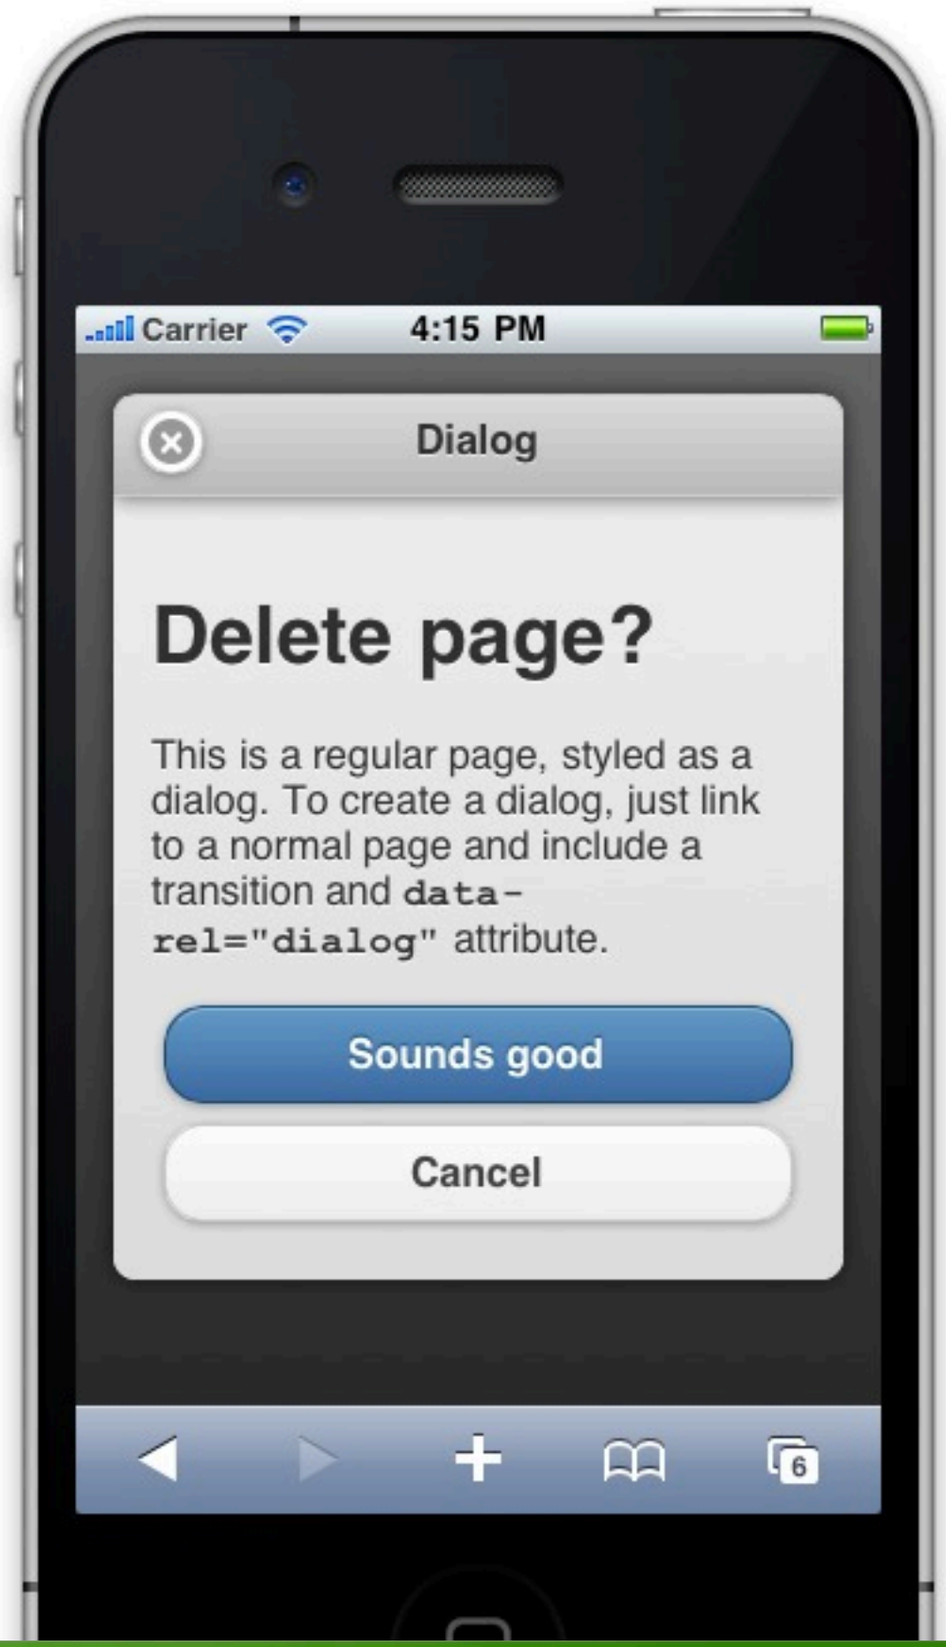


normal link



Same transition attribute

```
<a href="products.html" data-rel="dialog"
data-transition="flip">Open dialog</a>
```



Carrier
4:15 PM
Dialog
Delete page?
This is a regular page, styled as a dialog. To create a dialog, just link to a normal page and include a transition and data-rel="dialog" attribute.
Sounds good
Cancel

Closing dialogs

```
<a href="index.html" data-rel="back">Done</a>
```

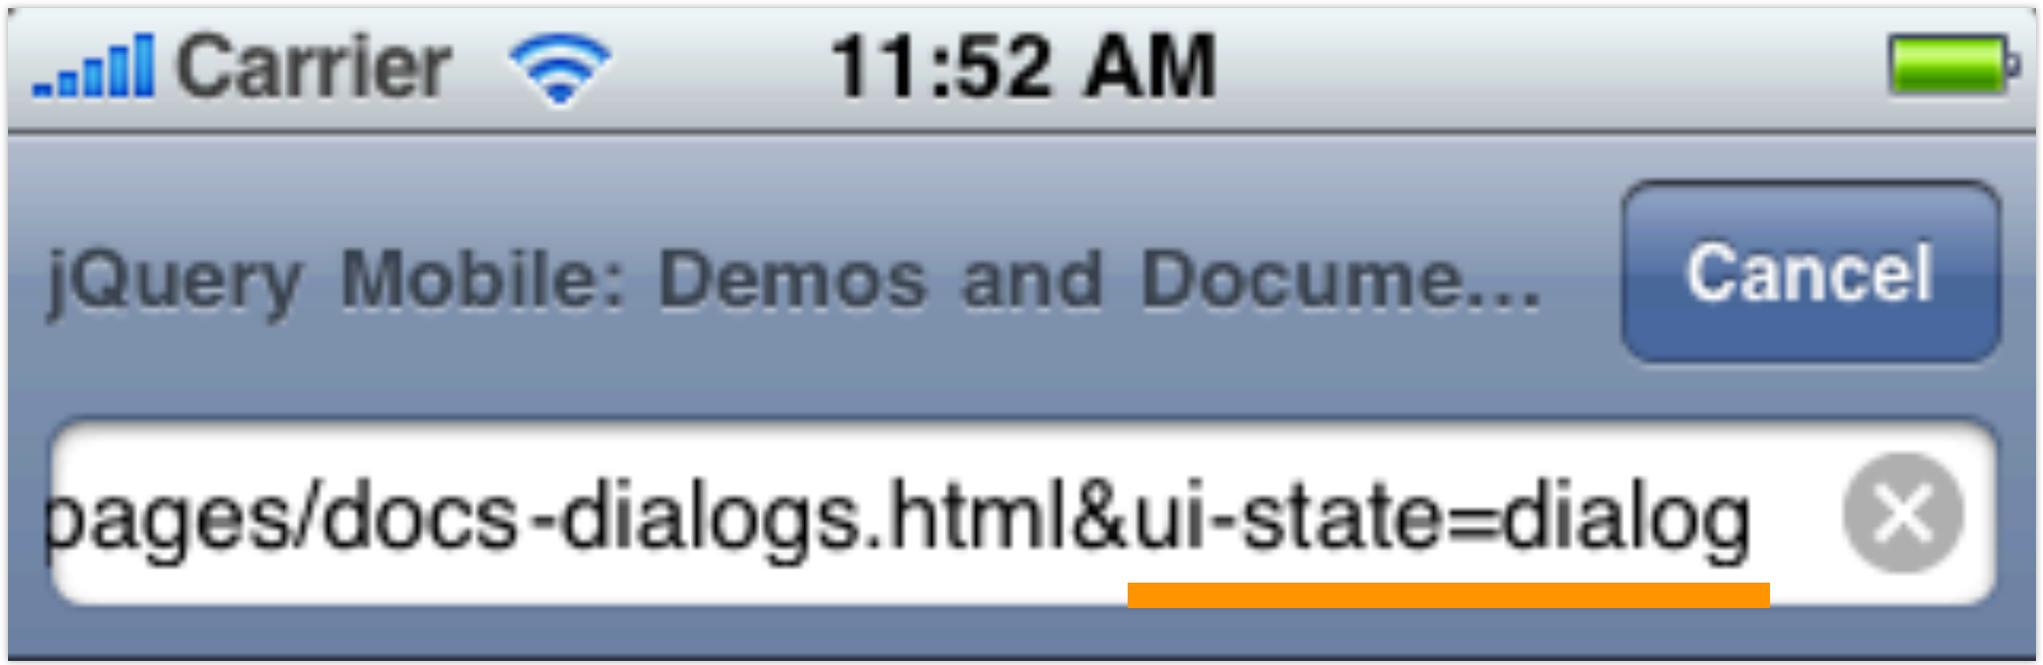
or via JS...

```
$('.ui-dialog').dialog('close')
```

or even...

```
window.history.back();
```

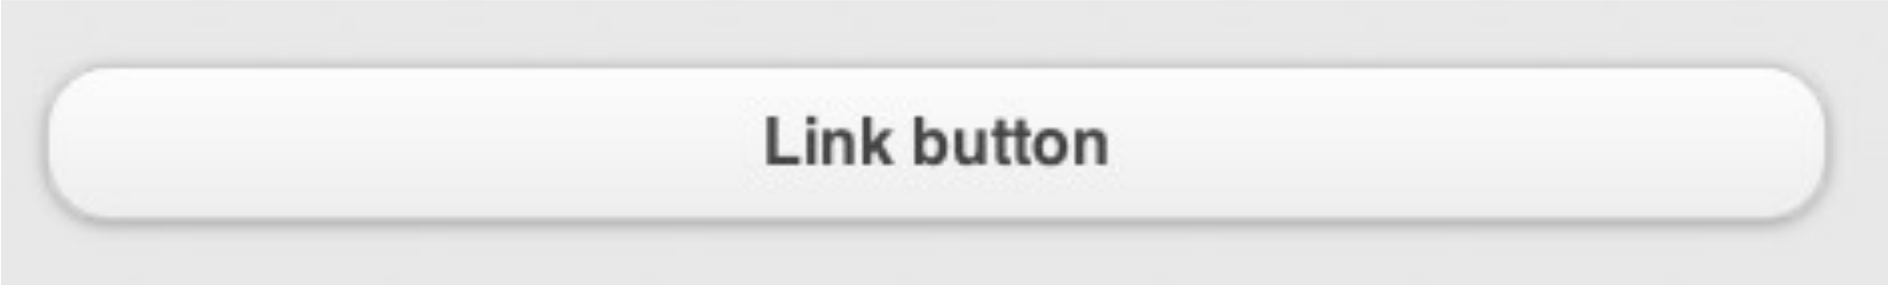
Dialogs = Not in history



...but dialogs can be closed with back button

Buttons

Link styled as a button



```
<a href="index.html" data-role="button">Link button</a>
```

Other markup options

Button based button:

Button element

Input type="button" based button:

Input type=button

Input type="submit" based button:

Input type=submit

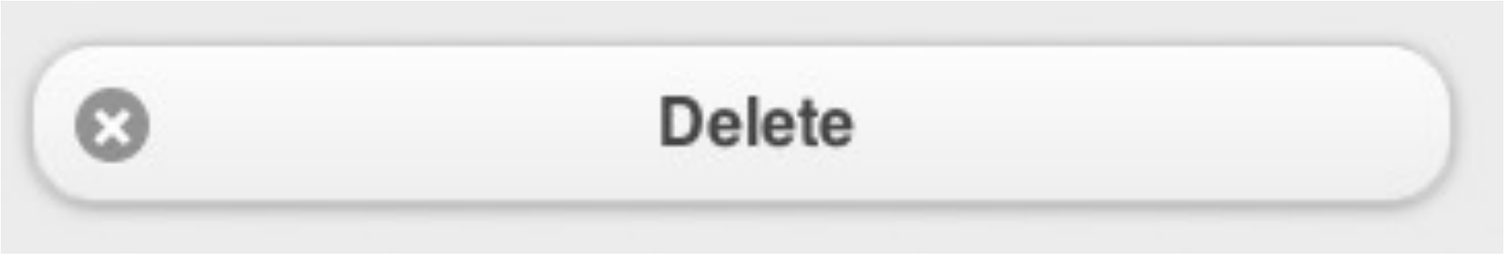
Input type="reset" based button:

Input type=reset

Input type="image" based button:

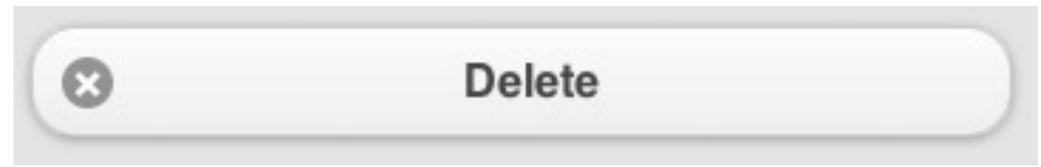
Input type=image

Icons

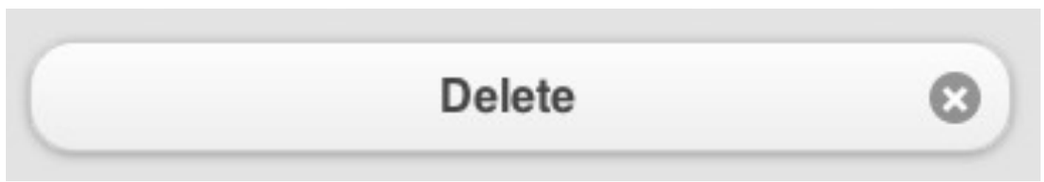


```
<a href="delete-confirm.html" data-icon="delete">Delete</a>
```

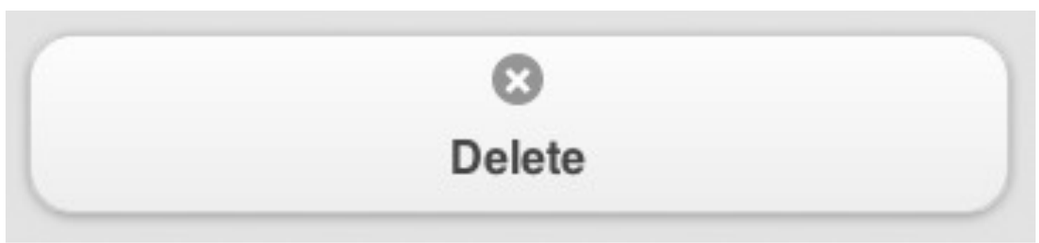
Icon position



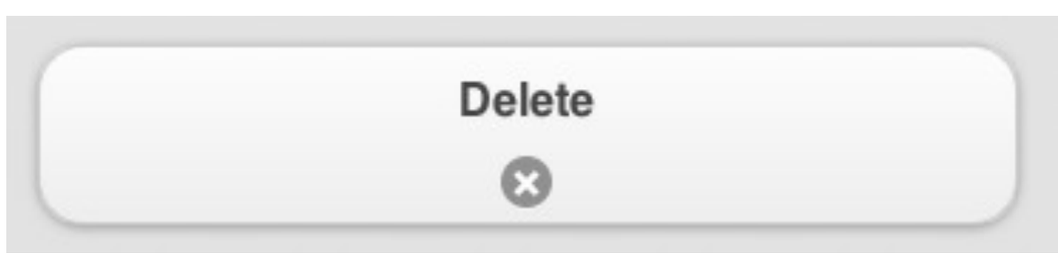
```
data-iconpos="left"
```



```
data-iconpos="right"
```



```
data-iconpos="top"
```

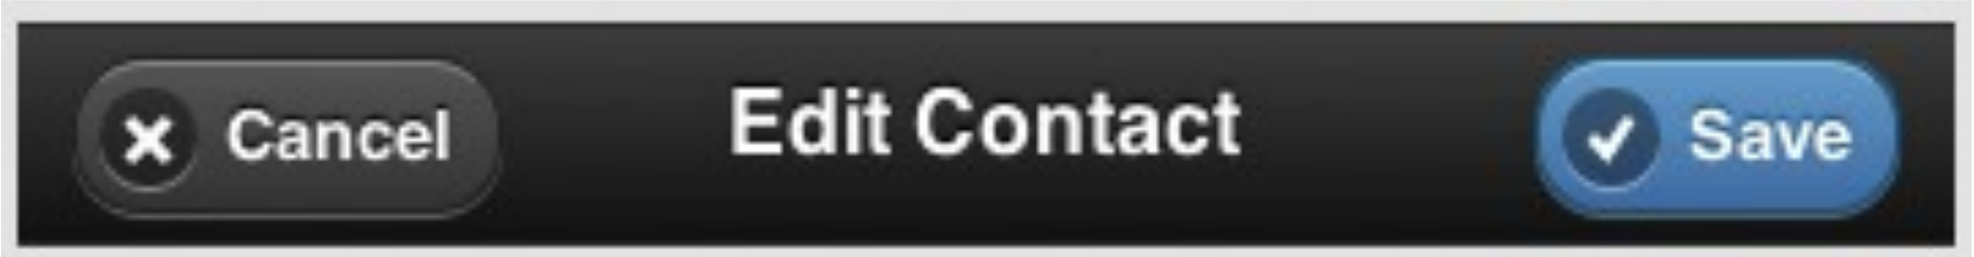


```
data-iconpos="bottom"
```

```
data-iconpos="no text"
```

Toolbars

Header bar



Links in header are automatically turned into buttons

```
<div data-role="header">
   <a href="index.html" data-icon="delete">Cancel</a>
   <h1>Edit Contact</h1>
   <a href="index.html" data-icon="check" data-theme="b">Save</a>
</div>
```

Auto back button

Disable with $.mobile.autoBackBtn = false;

```
<div data-role="header">
   <h1>Page Title</h1>
</div>
```

Custom back button

```
<div data-role="header">
   <a href="index.html" data rel="back" data-direction="reverse" data-
icon="arrow-l">Back</a>
   <h1>Page Title</h1>
</div>
```

About those back buttons...

About those back buttons...

- Appropriate for chromeless web apps
- Usually not appropriate for websites
- Considering disabling by default
- Why are they gone when I refresh?

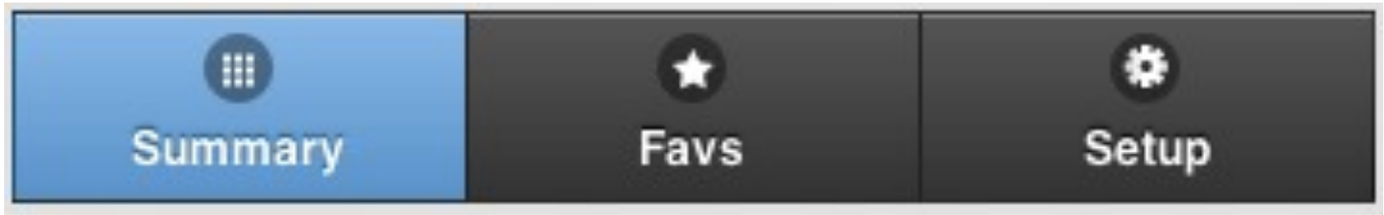
Footer

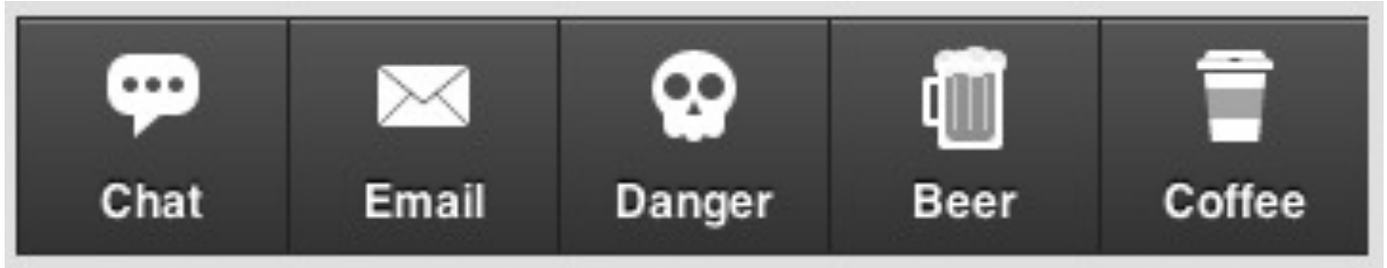
```
<div data-role="footer">
   <a href="index.html" data-role="button" data-icon="delete">Remove</a>
   <a href="index.html" data-role="button" data-icon="plus">Add</a>
   <a href="index.html" data-role="button" data-icon="arrow-u">Up</a>
   <a href="index.html" data-role="button" data-icon="arrow-d">Down</a>
</div>
```

Navbar

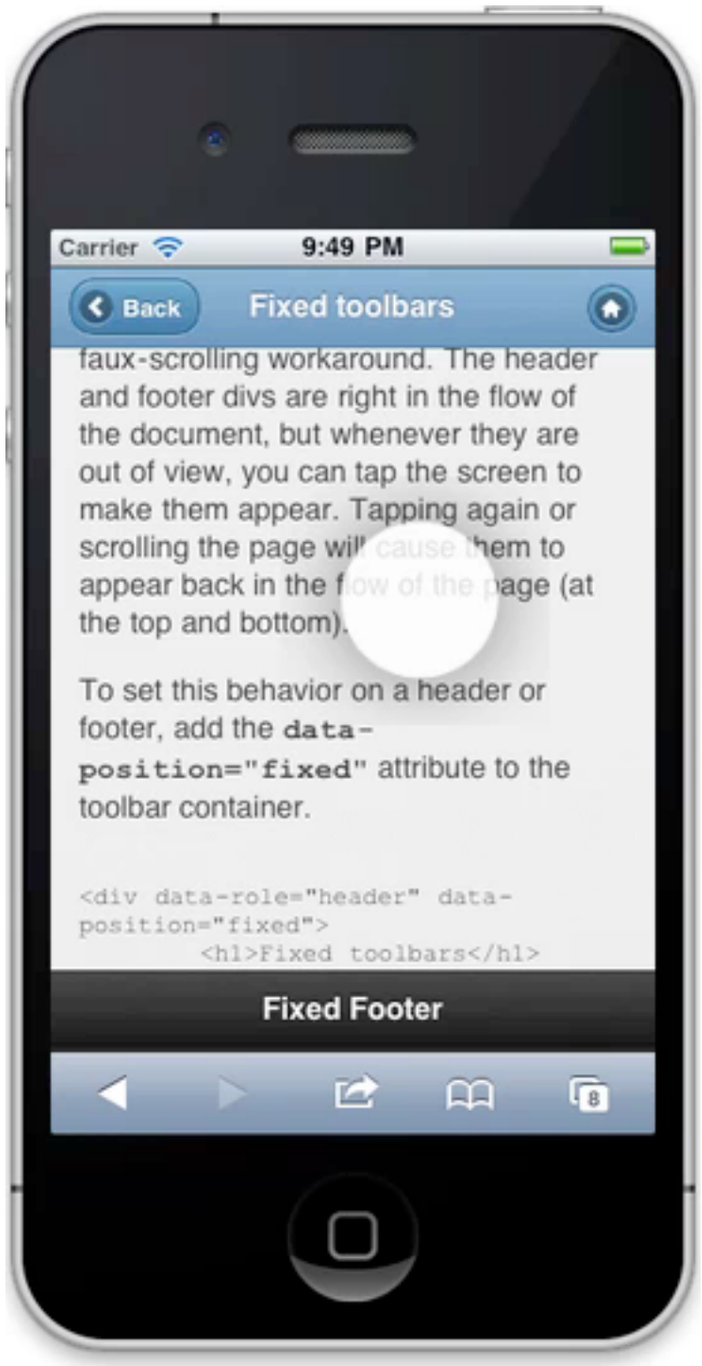
```
<div data-role="navbar">
      <ul>
         <li><a href="a.html" class="ui-btn-active">One</a></li>
         <li><a href="b.html">Two</a></li>
      </ul>
   </div><!-- /navbar -->
```

Navbar with icons



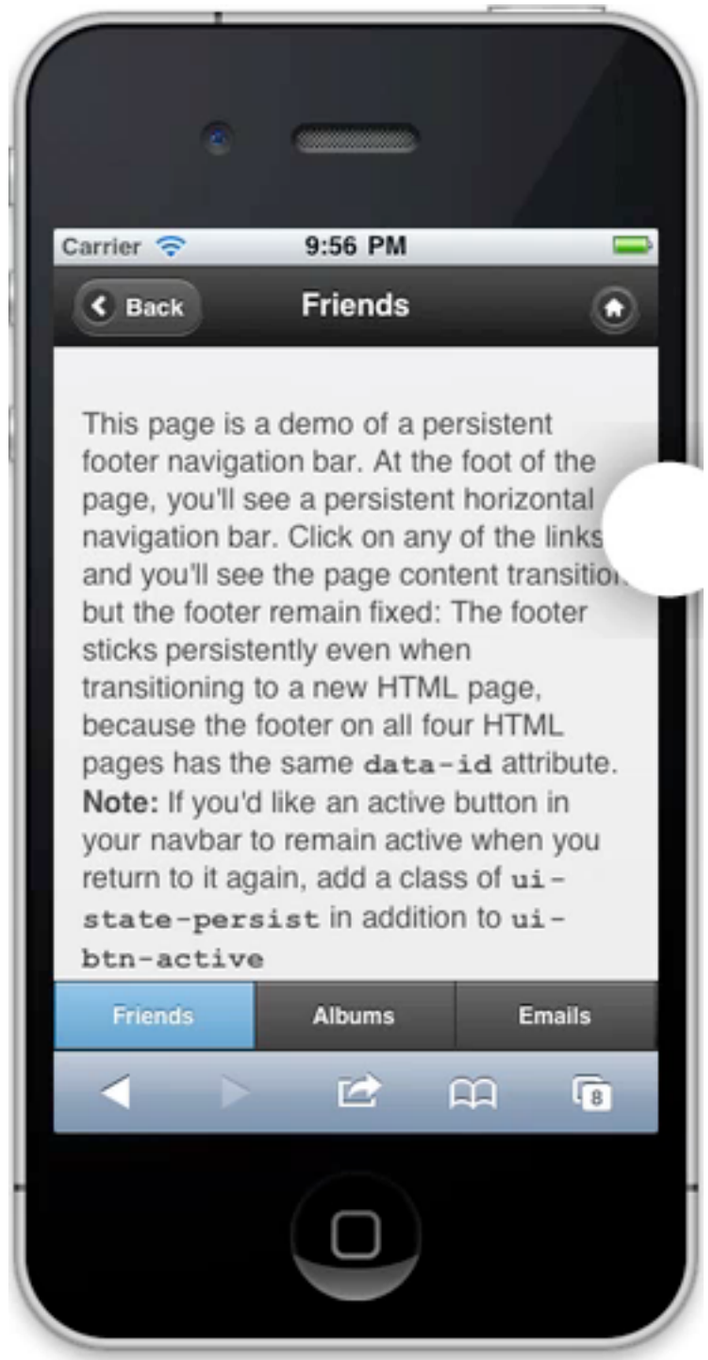


data-position="fixed"



data-fullscreen="true"

Persistent footer

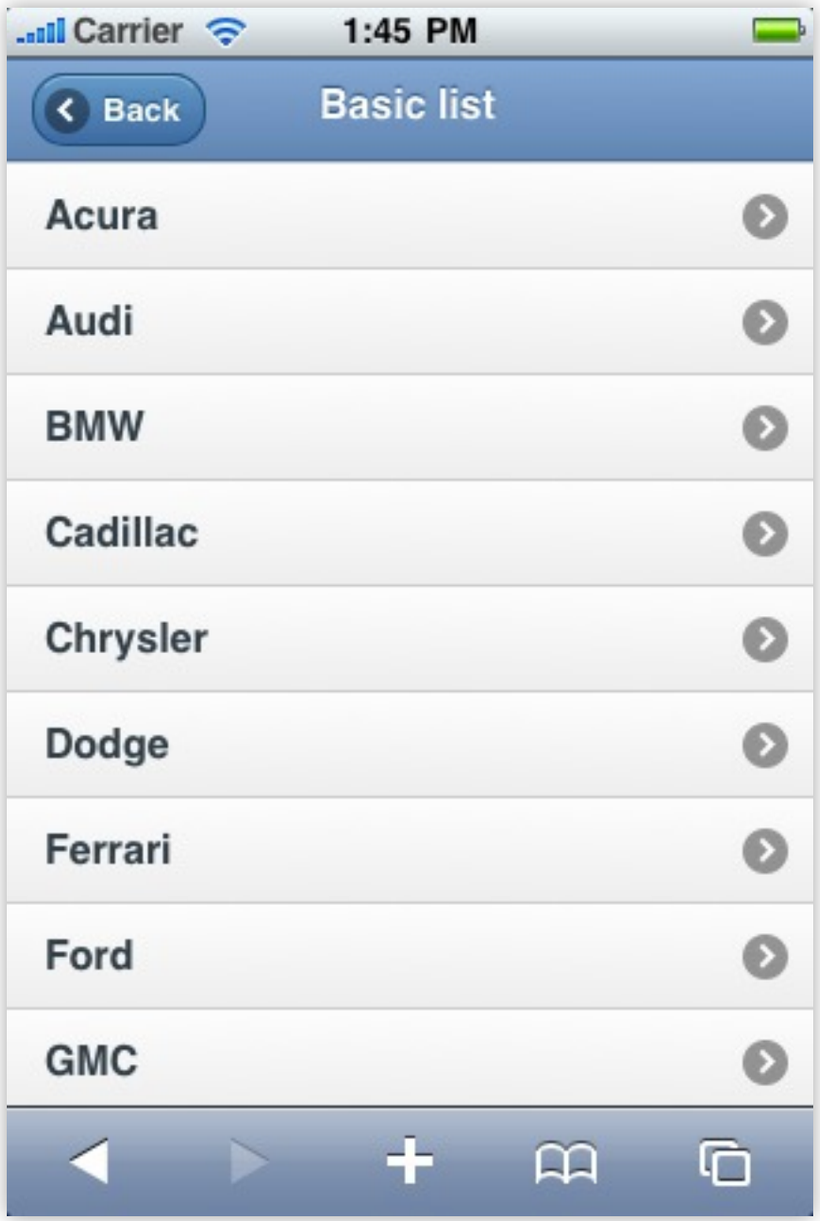


Listviews

Basic listview markup

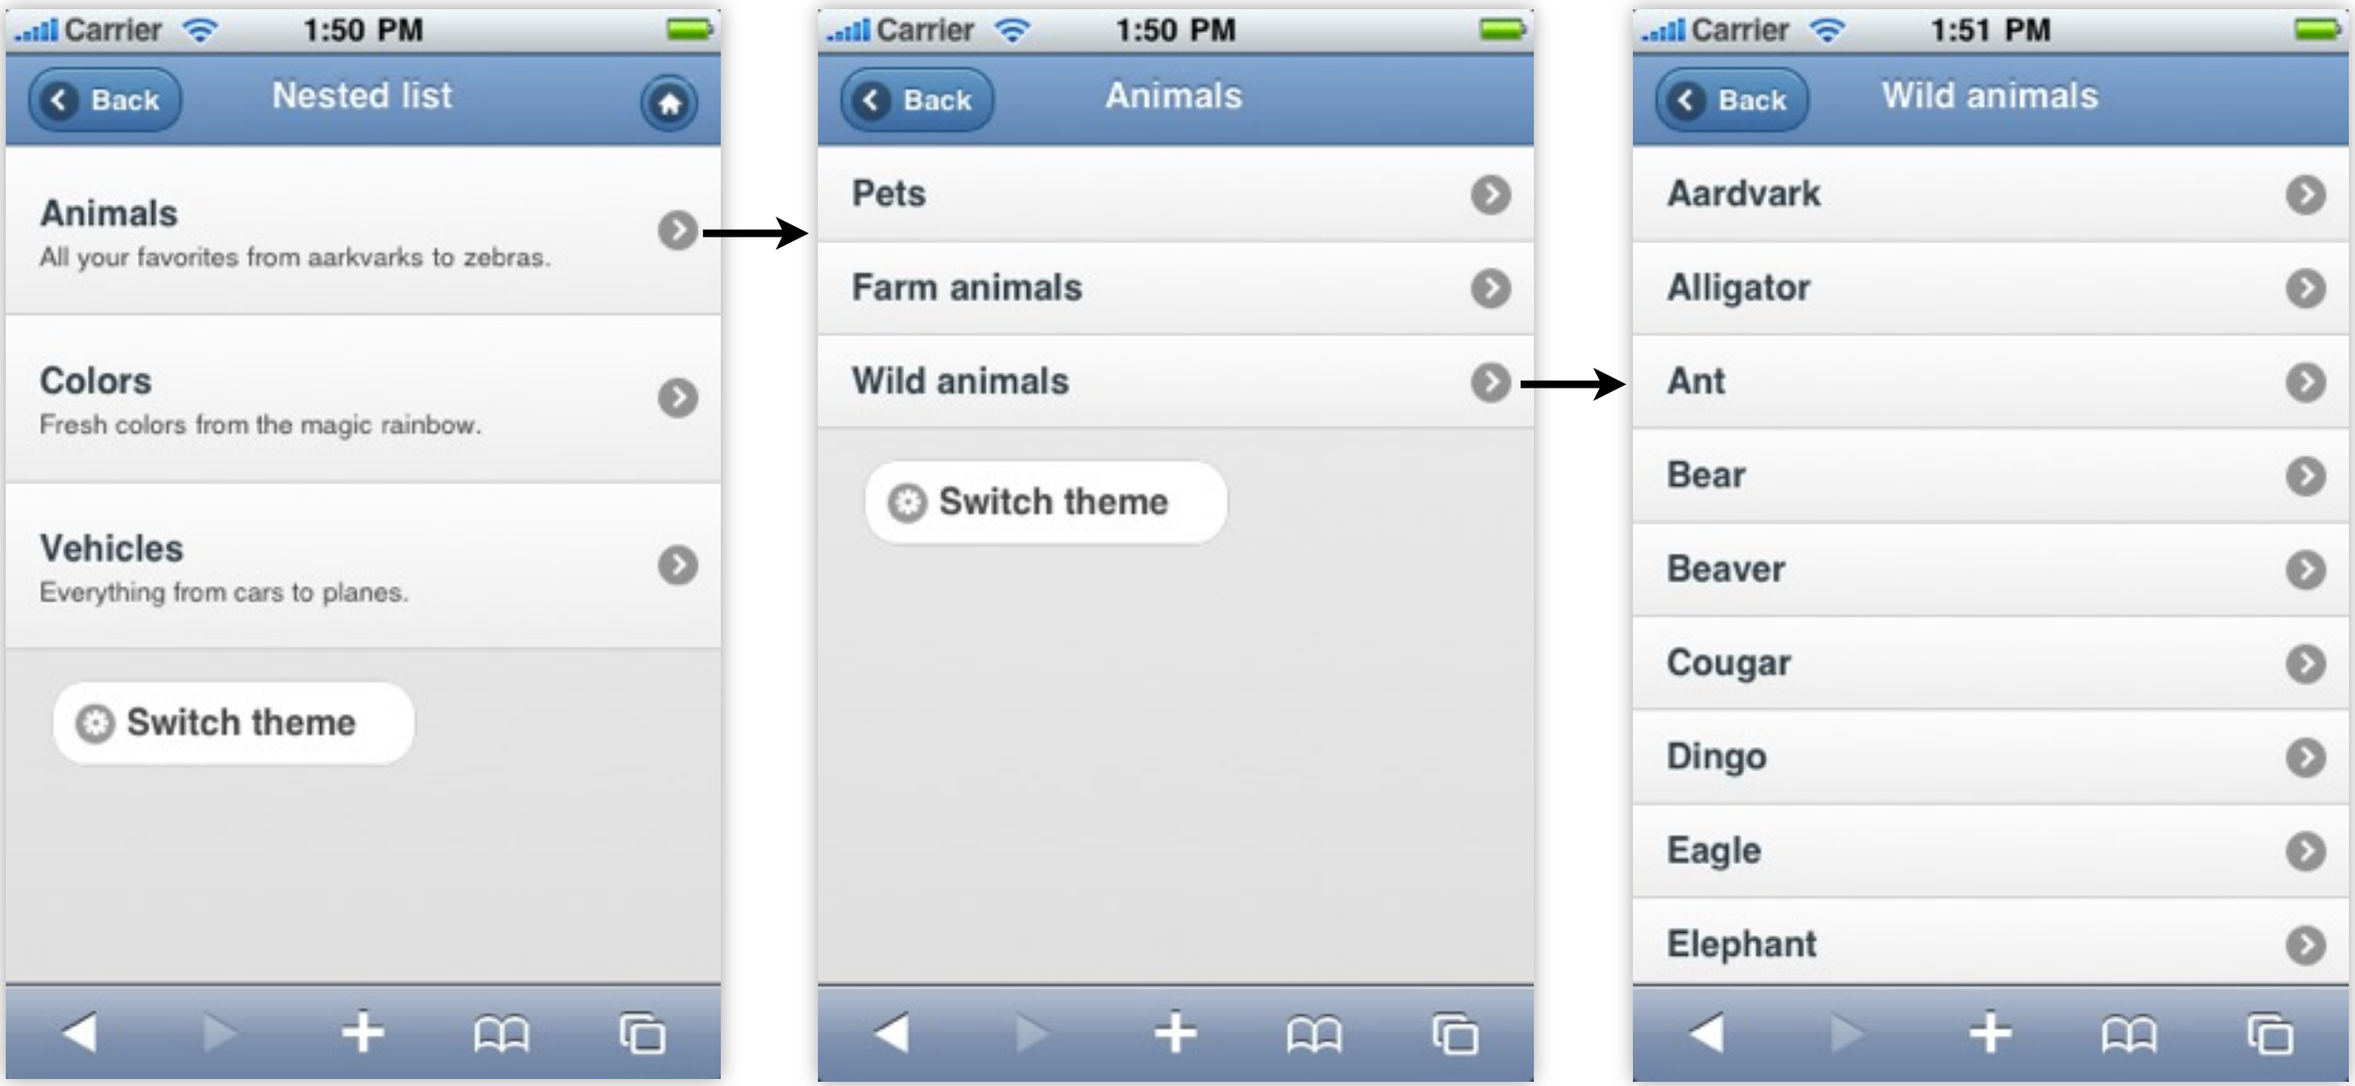
```
<ul data-role="listview">
  <li><a href="acura.html">Acura</a></li>
  <li><a href="audi.html">Audi</a></li>
  <li><a href="bmw.html">BMW</a></li>
</ul>
```

Unordered lists (UL)

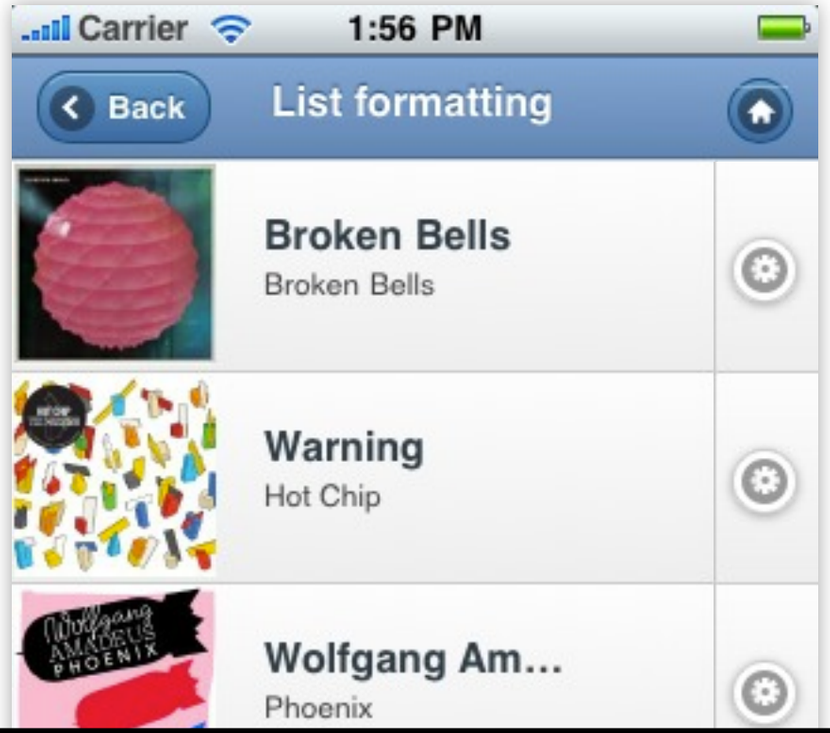


Ordered lists (OL)

Nested lists = Drillable pages

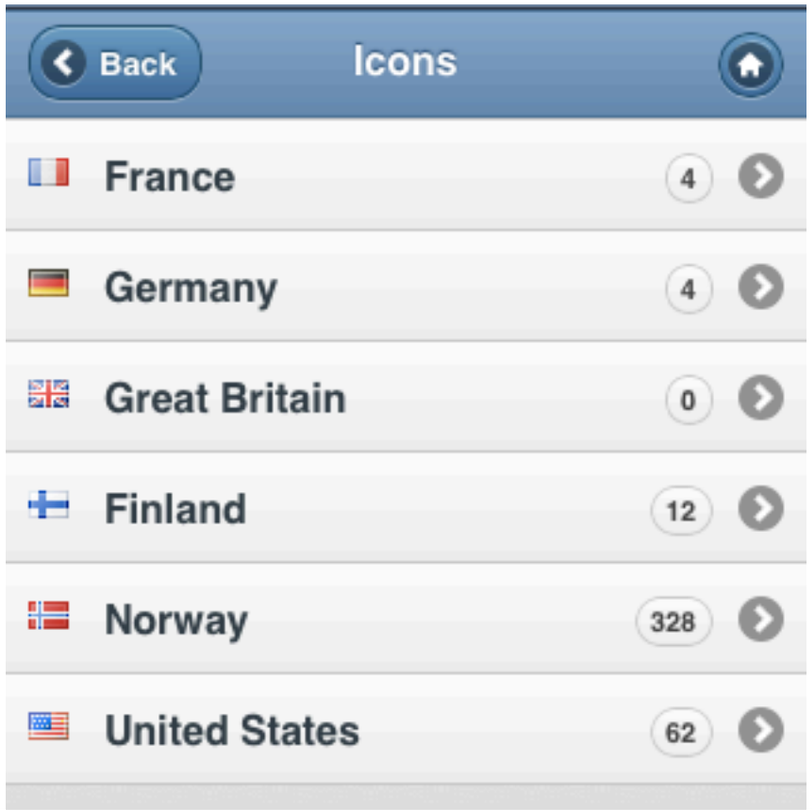


Split button lists



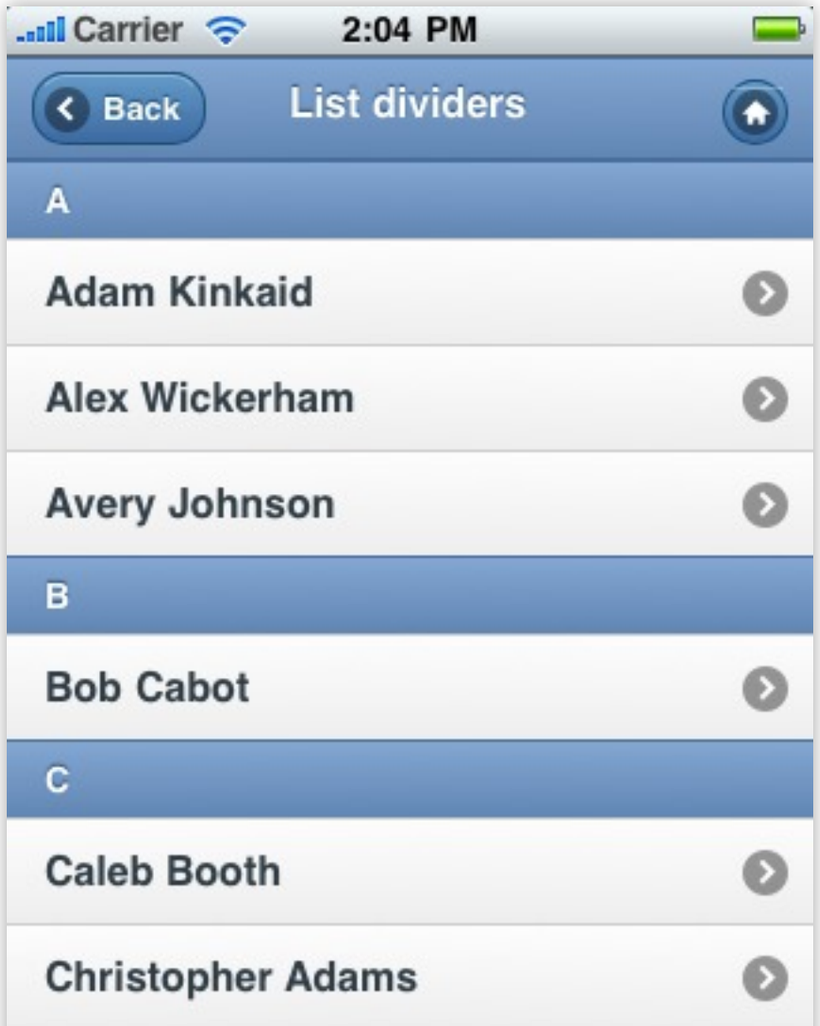
```
<li>
  <a href="bb-detail.html">
    <img src="images/album-bb.jpg" />
    <h3>Broken Bells</h3>
    <p>Broken Bells</p>
  </a>
  <a href="bb-purchase.html" data-rel="dialog">Purchase album</a>
</li>
```

Icons + count bubbles



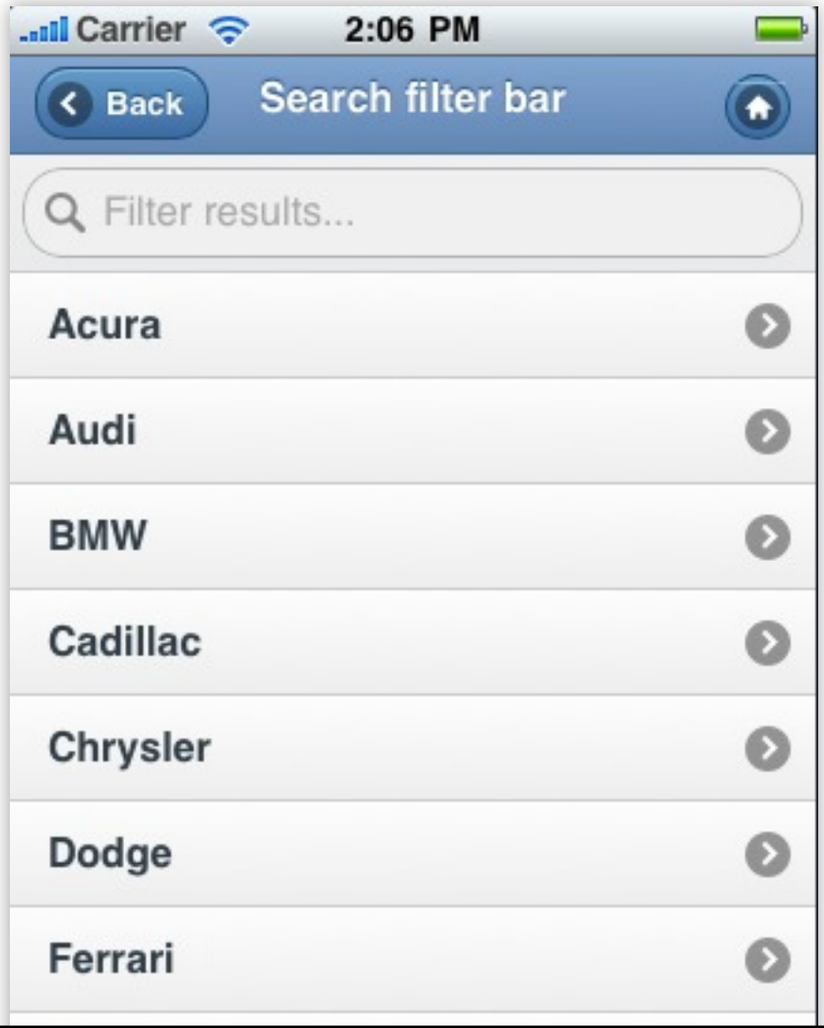
```
<li>
   <a href="france/">
     <img src="images/gf.png" alt="France" class="ui-li-icon">
     France
     <span class="ui-li-count">4</span>
   </a>
</li>
```

List dividers



```
<li data-role="list-divider">A</li>
```

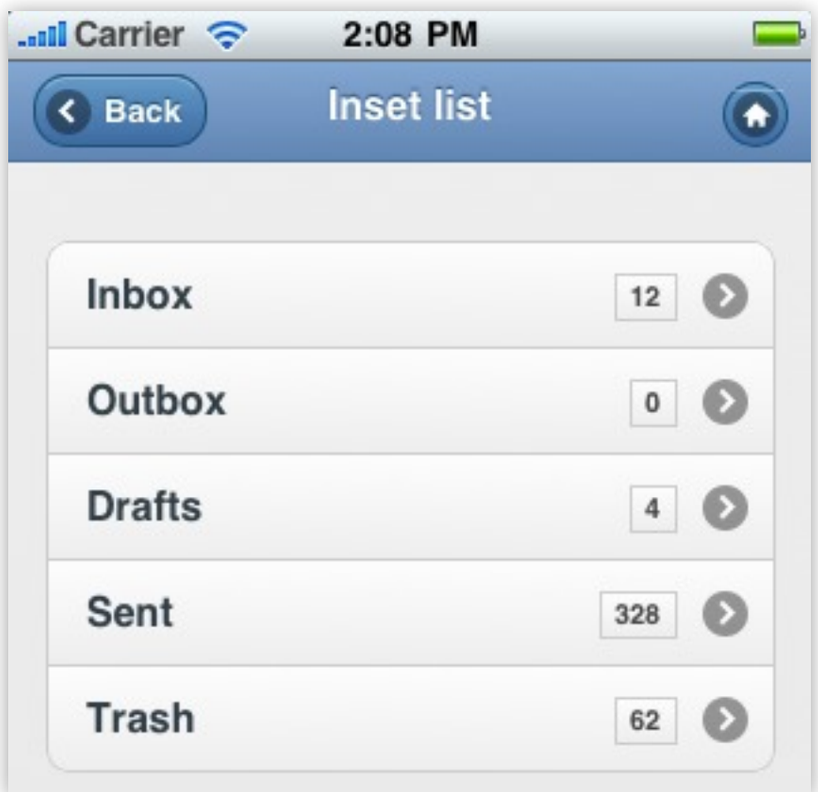
Filter bar



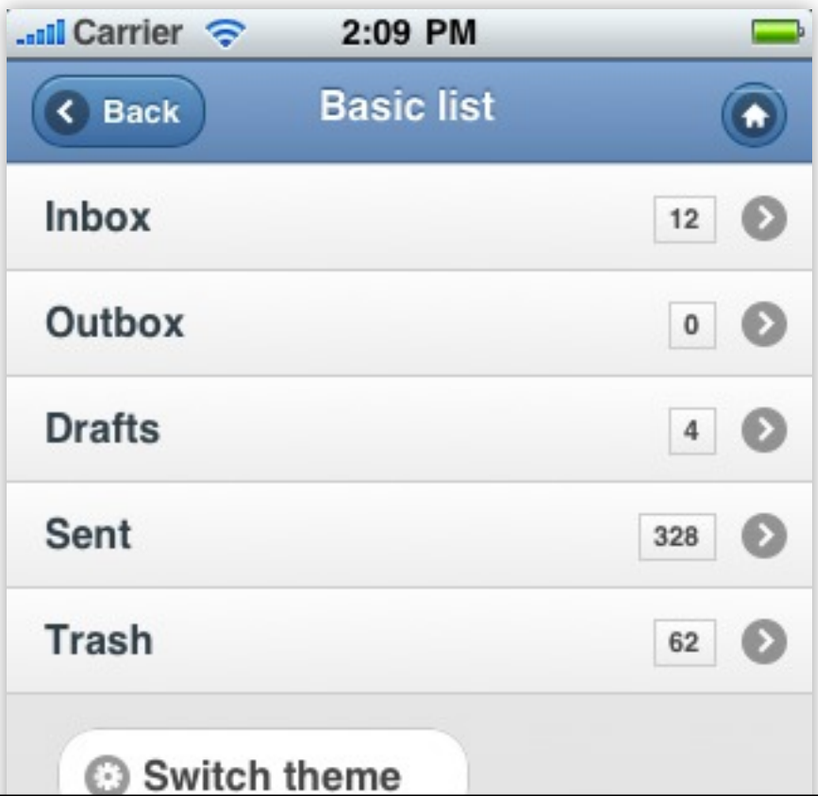
```
<ul data-filter="true">
```

Inset style

Inset



Default



```
<ul data-inset="true">
```

Adding Listview Items

Append, then Refresh!

```
$( “ul#people” ).
    .append(
      “<li><a href=’...’>Joey</a></li>”
    ).listview( “refresh” );
```

Forms

Start with a form element

```
<form action="handler.php" method="post">

...

</form>
```

Associate labels with IDs

```
<form action="handler.php" method="post">

    <label for="name">Text Input:</label>
    <input type="text" name="name" id="name"
value=""  />

</form>
```

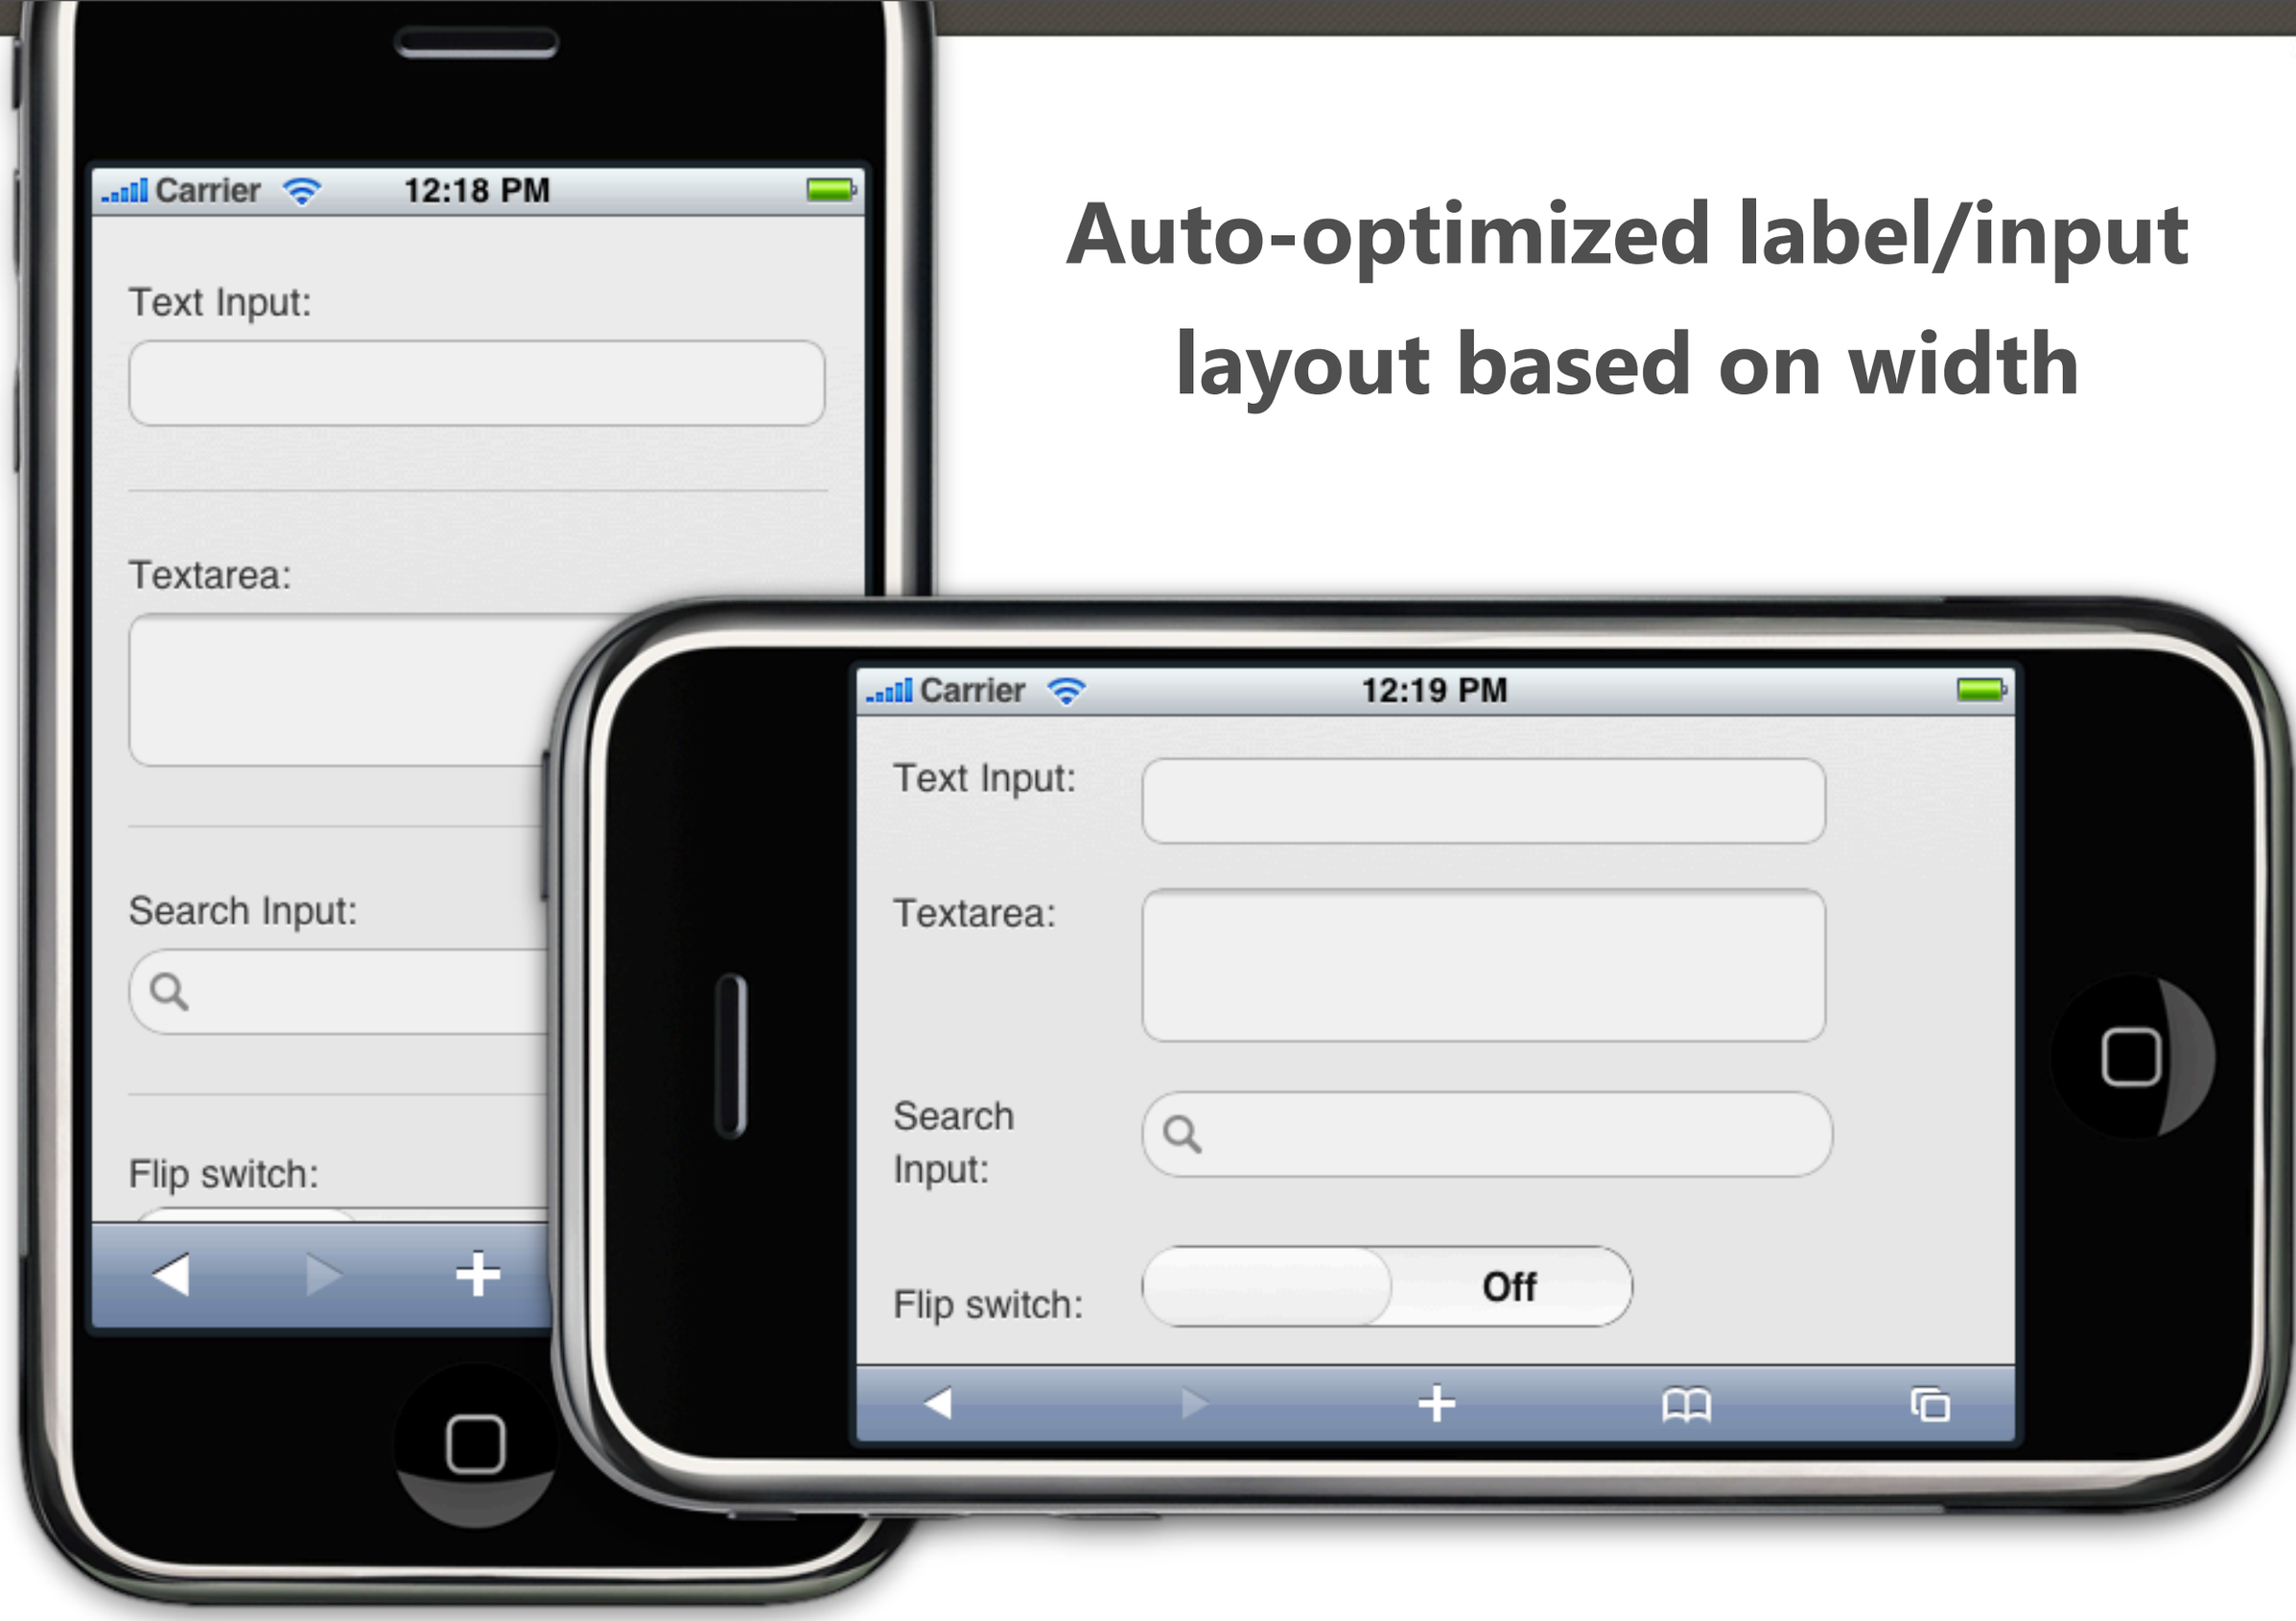
Field containers

```
<form action="form.php" method="post">

<div data-role="fieldcontain">
    <label for="name">Text Input:</label>
    <input type="text" name="name" id="name"
value=""  />
</div>

</form>
```

Auto-optimized label/input layout based on width



Text input

```
<label for="name">Search:</label>
<input type="text" id="name" value="" />
```

```

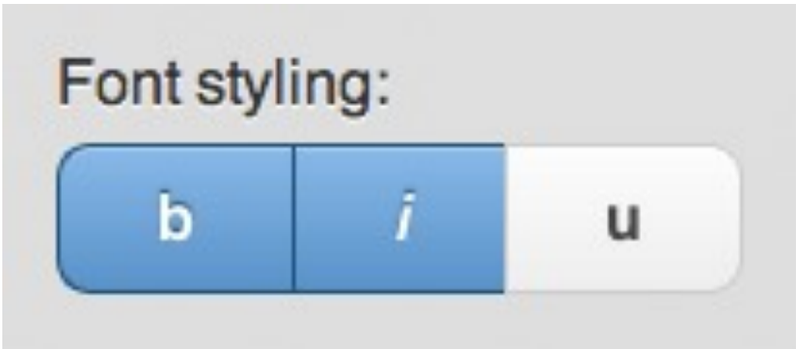
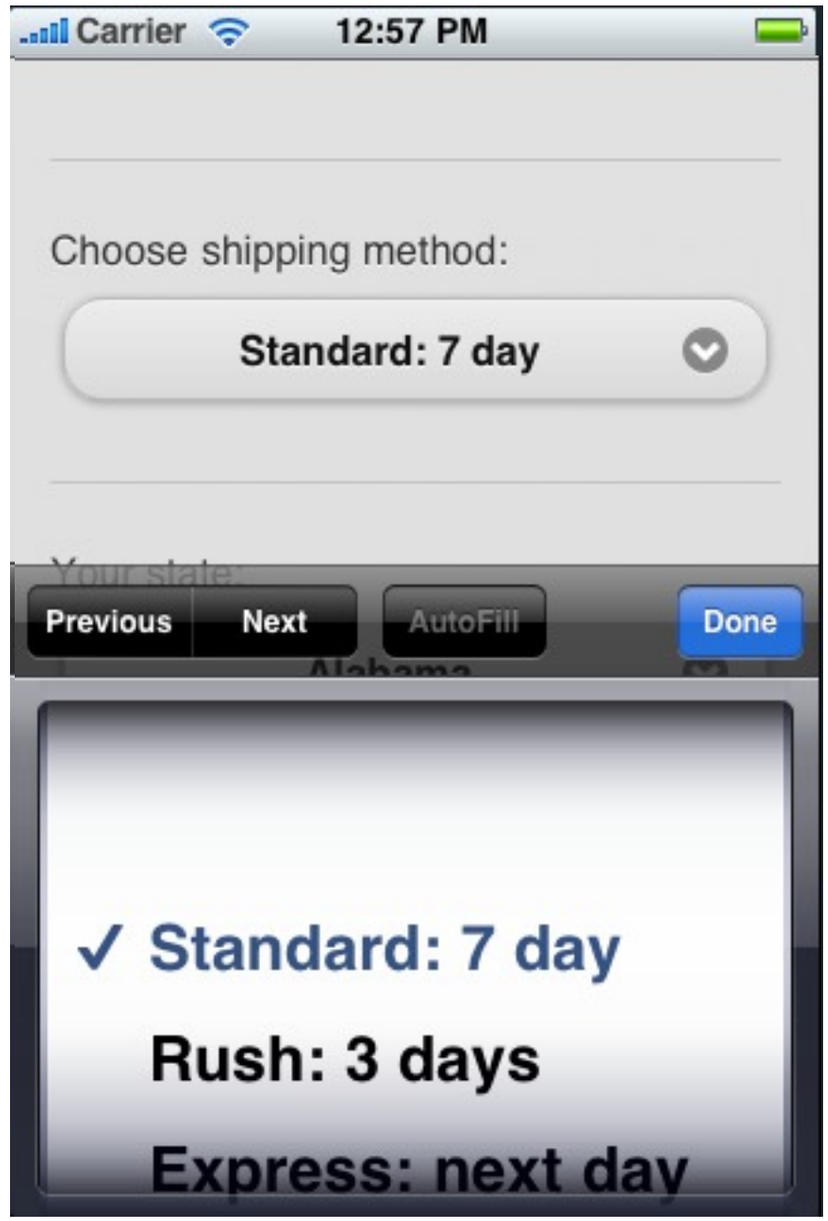
Checkboxes too



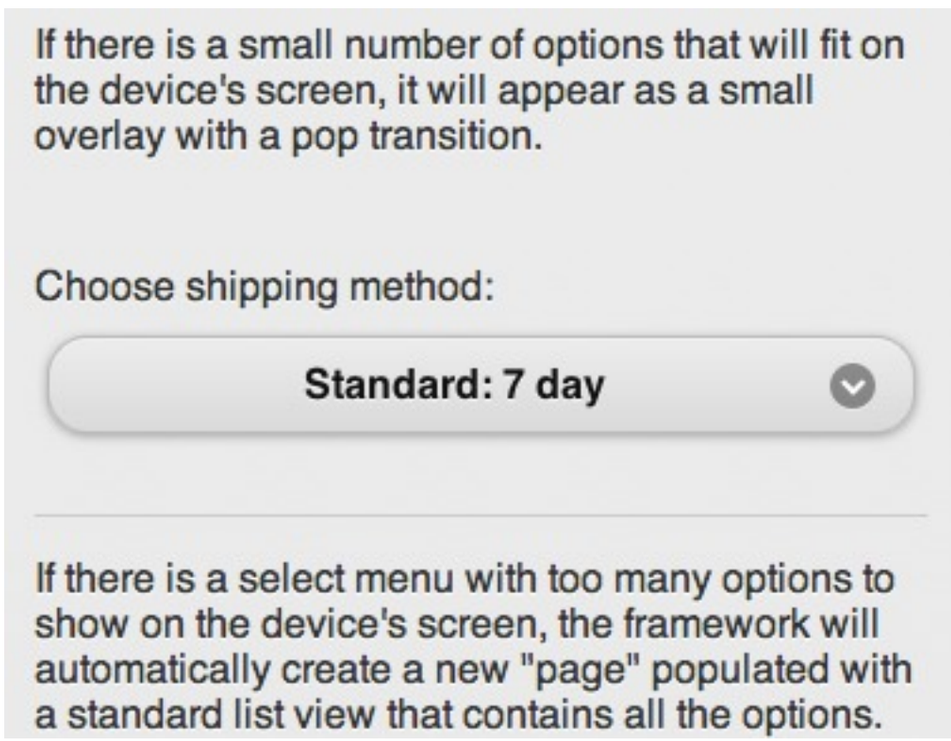
Select menu

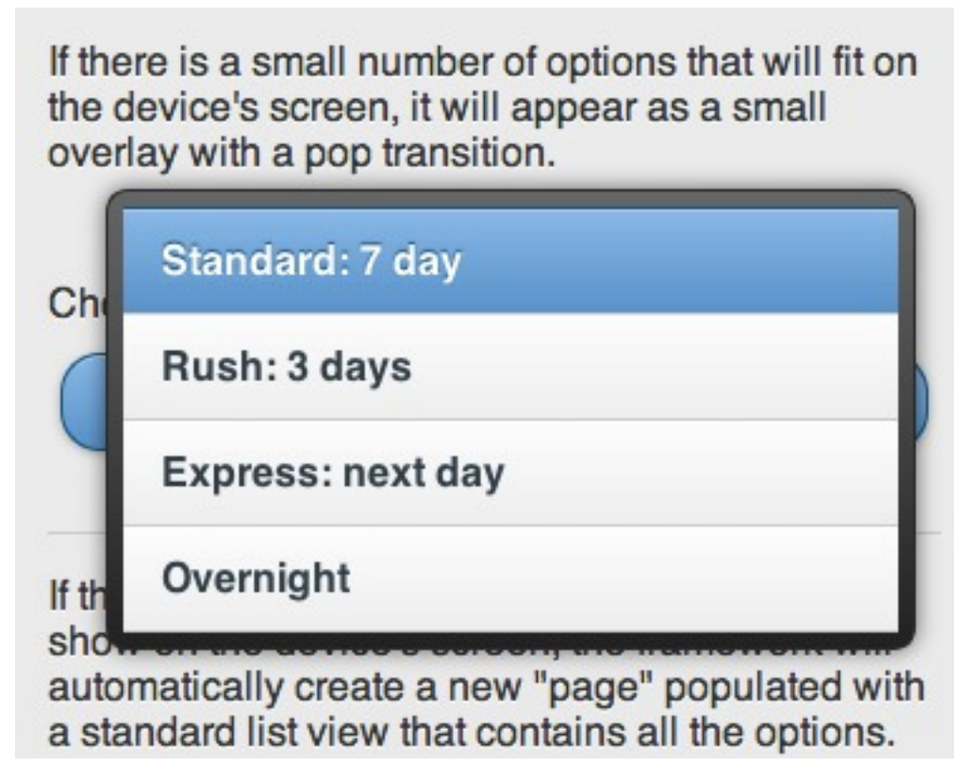
```
<label for="select-choice-1">Choose shipping method:</label>
<select name="select-choice-1" id="select-choice-1">
  <option value="standard">Standard: 7 day</option>
  <option value="rush">Rush: 3 days</option>
  <option value="express">Express: next day</option>
  <option value="overnight">Overnight</option>
</select>
```

data-native-menu="true"

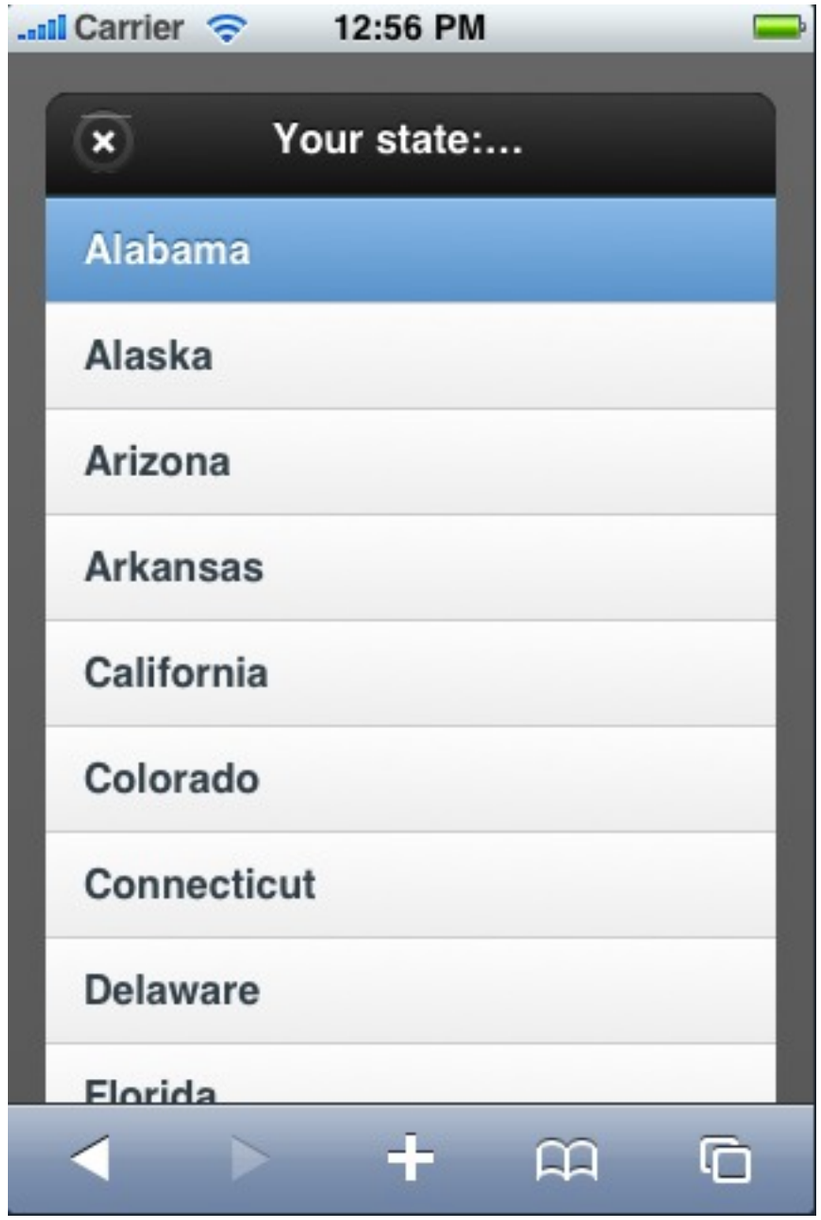


data-native-menu="false"

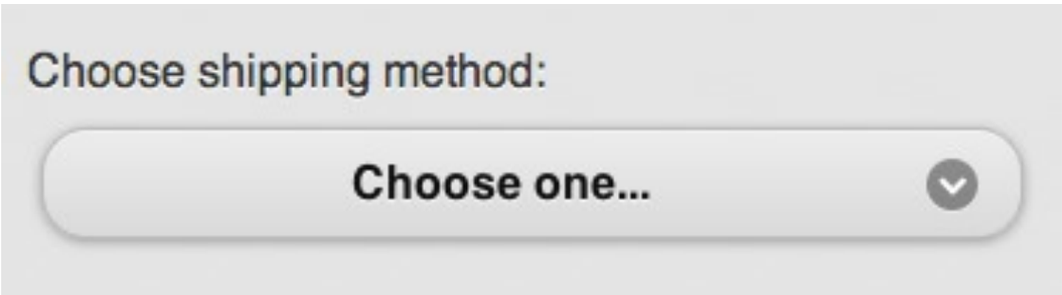


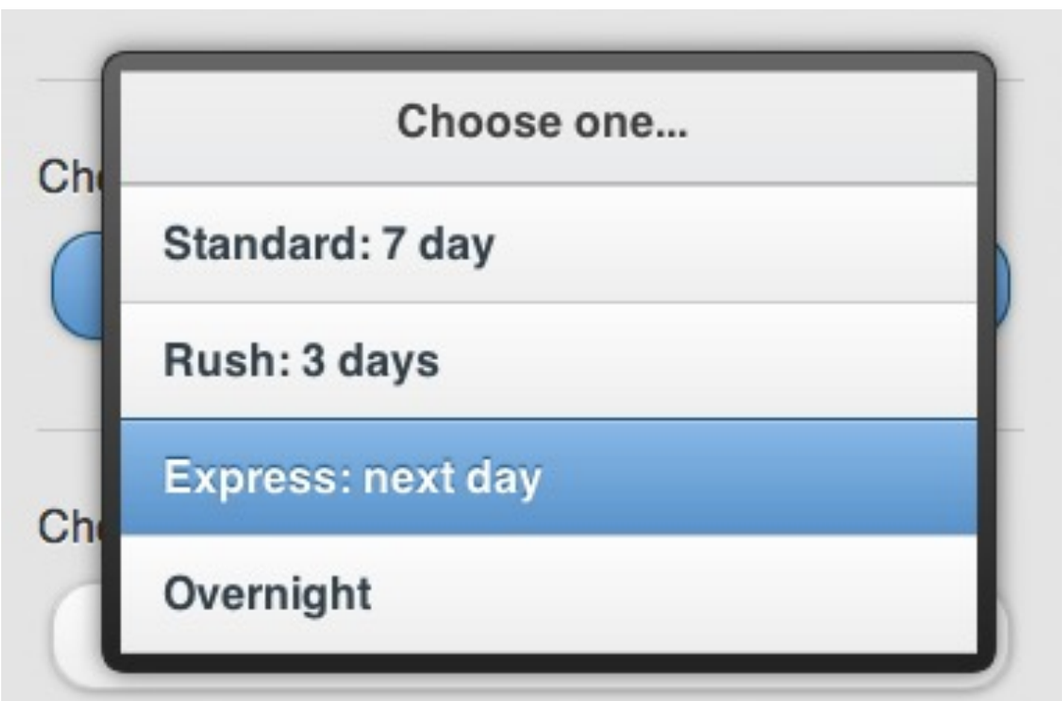


Long select menu



Placeholder option





An option with...

- No (or empty) value attribute
- No text node
- data-placeholder="true"

Append, then Refresh!

```
$( "select#my-select" ).
    .append(
        "<option value='a'>A</option>”
    ).selectmenu( “refresh” );
```

Set Value, refresh!

```
var mySelect = $('select#my-select');

mySelect.get(0).selectedIndex = 2;

mySelect.selectmenu("refresh");
```

Submitting forms

Ajax form submission

```
<form action="handler.php" method="get">
```

Submitting via jQuery

```
$.mobile.changePage({
    url: "data/handler.php",
    type: "post",
    data: { "shipping": "Fast!" }
});
```

Technical bits

Technical bits

Oh, you want to see some JavaScript too?

Events

Custom Events

- tap
- taphold
- swipe (left/right)
- scroll (start/stop)
- orientationchange
- new internal virtual events too

DOM was ready... yesterday

"DomReady" becomes "pagecreate"

Dom Ready = pagecreate

```
$( "#mypage" ).live( "pagecreate",
    function(){
        //do something!
    }
);
```

Configuring Defaults

Configurable options

- **defaultTransition** (*string*, default: 'slide')
- **loadingMessage** (*string*, default: "loading")
- **errorMessage** (*string*, default: "Error loading page")
- **backBtnText** (*string*, default: 'back')
- **ajaxEnabled** (*boolean*, default: true)
- **and more!**

Overriding defaults

Extend the $.mobile object:

```
$(document).bind("mobileinit", function(){
  $.extend(  $.mobile , {
    foo: bar
  });
});
```

...or set individually:

```
$(document).bind("mobileinit", function(){
  $.mobile.foo = bar;
});
```

Overriding defaults

```
<script src="jquery.js"></script>
<script src="defaults.js"></script>
<script src="jquery-mobile.js"></script>
```
